ITALDIZAIN · MARKETING · MEETING FRI 16 OCT 2026

AI in our marketing — what to try before Friday

Tools for content, SEO, ads, social and automation, with a safety light on every one. Try a few, keep sensitive data out, and come ready to say yes, not yet or no.

START HERE · 5 LINES

Why this page, and what to bring on Friday

1. **Why:** AI can already take hours off captions, product texts, ad variants, reports and site fixes. Huseyn wants the team to use it a lot, and your worry about turnover, customer and supplier data is fair. This page answers both.
2. **The short version:** the risk depends on which account you use, not on whether you use AI. Business plans do not train on your data; personal and free accounts can.
3. **How to use it:** read 'Keep it safe first', then open your role's checklist at the bottom. Each card has a '+' with a 10–30 minute exercise. Use only public or made-up data in every exercise.
4. Filters at the top narrow the list by section, safety light and verdict; the search box finds any tool. Hover the dotted words for a plain explanation.
5. **Bring to Friday:** your scores from 3–5 exercises, the tasks you would hand to AI first, the data you are still worried about, and a yes / not yet / no on switching your workflow.

67 tools in 8 sections · checked 13 Oct 2026 · prices change: check before buying.

B) SAFETY · 8 TOOLS

Keep it safe first

The confidentiality risk comes from which account people use, not from AI itself. Free and personal accounts (ChatGPT Free/Plus, Claude Free/Pro, Gemini on a personal Gmail) may use chats for training, and some are read by reviewers. Business plans say in their contracts that they do not. Italdizain already pays for Microsoft 365, so Copilot Chat with the work account is the first safe tool. For truly secret material, run a model on your own computer or swap real names and numbers for placeholders. Customer data stays RED because Azerbaijan's personal-data law generally requires written consent to pass data abroad, and every AI cloud is abroad.

THE PASTE RULES · PROPOSED COMPANY RULE

What may go where

Green: any approved AI tool. Amber: company business accounts only. Red: never in a cloud AI.

DATA	LIGHT	WHERE IT MAY GO	EXAMPLE
Public product information, brand stories, website text, published product photos	Green	Any approved AI tool	'Write 3 captions for this vase from our website.'
Draft posts and captions, campaign ideas, translations of public text, made-up examples	Green	Any approved AI tool	'Ideas for an autumn tableware week.'
Unreleased campaigns, launch dates, internal plans, unreleased product photos	Amber	Company business accounts only (Copilot Chat with green shield, ChatGPT Business, Claude Team); images only in Firefly or Canva Business	'Plan the December launch of the new collection.'
Supplier names; turnover totals or growth with no names attached; ad results with revenue columns removed	Amber	Company business accounts only	'Instagram sales up 12% this quarter: what worked?'
Customer names, phones, emails, purchase histories, VIP lists	Red	Never in a cloud AI. Local model, or anonymise first and keep the key on your PC	'Aygün M., +994 50…, bought a 24-piece set'
Exact turnover and margins per boutique or brand; 1C exports	Red	Never in a cloud AI. Local model (LM Studio) only	'September sales by boutique from 1C'
Supplier prices, purchase prices, contracts with prices	Red	Never in a cloud AI	'Our purchase price list from the Italian supplier'
Staff data, passport or ID scans, passwords and API keys	Red	Never in any AI tool	'The Meta Ads login is…'

Which plans don't train on your data

The same app can be safe or unsafe depending on the plan you sign in with.

TOOL	SAFE PLAN	TRAINS ON YOUR DATA?	RISKY PLAN	TRAINS ON YOUR DATA?
Microsoft Copilot Chat	Work account (green shield)	No	Personal Microsoft account	No company protection
ChatGPT	Business / Enterprise	No (off by default)	Free / Go / Plus / Pro	Yes, unless switched off
Claude	Team / Enterprise / API	No (feedback chats aside)	Free / Pro / Max	Only if 'Help improve Claude' is on (kept 5 years)

TOOL	SAFE PLAN	TRAINS ON YOUR DATA?	RISKY PLAN	TRAINS ON YOUR DATA?
Google Gemini	Workspace (we don't have it)	● No	Personal Gmail	● Yes with Keep Activity on; human review
Canva	Teams / Business / Enterprise	● Never (cannot be switched on)	Free / Pro	● On by default
Adobe Firefly	Any plan	● Never on user content	Partner models inside Firefly	● Adobe says no; not covered by indemnity
Photoroom	Enterprise	● No unless agreed	Self-serve app/API	● On by default, opt-out
Runway / Higgsfield	Enterprise contract	● No	Self-serve	● Yes
Midjourney / Kling / CapCut	None suitable	—	All plans	● Public by default / trains / perpetual licence
Zapier	Enterprise	● Opted out automatically	Free / Pro / Team	● Opt-out available
Semrush	All plans	● No (AI terms)	—	—
Sprout Social / Hootsuite	Paid plans	● AI providers no; vendor itself may	—	—
DeepSeek (hosted)	None	—	App and website	● Yes; data stored in China

COMPANY AI RULES · SAFETY

Green / amber / red paste rules + one-page AI policy

A two-page company rule saying which AI tools are approved and what data may go into each one, adapted from a free template.

WHAT IT MEANS FOR YOU

This answers the team's confidentiality fear with clear rules rather than a ban. The catch: rules only work if they are short, everyone is trained, and someone checks a sample of chats now and then.

Try now | 1 hour to draft, 15 min to explain | Free templates

Green A document, not a tool: nothing is sent anywhere.

3	2–3 pages	6
data levels: green, amber, red	recommended length for a small-business AI policy	areas to cover: tools, data, human review, exceptions, training, consequences

Try this before Friday

exercise · 1 hour to draft, 15 min to explain

> Each person writes down 10 things they pasted or would like to paste into AI this month, using made-up wording, for example 'VIP client list from 1C'. They sort each one into green, amber or red using the table at the top of this page. Bring the disagreements to the meeting.

Should we use it?

good for · not for · advice

GOOD FOR

- Making the Friday discussion concrete
- Onboarding new staff
- Showing the board that the risk is managed

NOT FOR

- Replacing a legal check of customer-data processing
- Technical blocking (see Purview)

Our advice: Make every rule something you can check: 'no customer names in prompts' can be verified by reading a chat history in five minutes. Name an owner and a review date.

Privacy and data details

plan · sources

No data goes anywhere: this is a document. Proposed rules: GREEN = public or made-up content, in any approved tool. AMBER = internal plans, totals, supplier names, only in company business accounts (Copilot Chat with the green shield, ChatGPT Business, Claude Team). RED = customer personal data, exact turnover or margins per boutique, supplier prices and contracts, staff data, 1C exports, passwords. Never put RED in a cloud AI; use a local model or anonymise first.

Plan and price: Free templates: Michalsons (law firm, for smaller companies), ezel.ai (editable), Drata (for small teams), Securityscientist (Word file, may ask for an email).

LEGAL BASICS · SAFETY

Azerbaijan Law on Personal Data + GDPR basics

The rules that decide whether customer data may go into a foreign AI service: the Azerbaijani law on personal data, plus the EU's GDPR when serving people in the EU.

WHAT IT MEANS FOR YOU

This is why customer data is RED, while turnover is a business-secret question rather than a privacy-law one. The catch: sources disagree on the 2024–2026 details, so check with local counsel.

Try now | 20 min to read | Free to read

● Red Customer personal data never goes into any cloud AI until a lawyer confirms consent covers it.

No. 998-IIIQ
Law on Personal Data, 11 May 2010

Written
consent generally needed to process data and pass it on or abroad

Art. 3(2)
GDPR applies when offering goods or services to people in the EU

+ Try this before Friday

exercise · 20 min to read

> Take one real-looking but MADE-UP customer record (name, phone, purchase) and decide as a team which parts could go into AI (the purchase category, the season) and which never (name, phone). Rewrite it as 'Client A, Baku, bought a 12-piece tableware set'.

+ Should we use it?

good for · not for · advice

GOOD FOR

- Deciding what may go into AI
- Writing consent text for loyalty and CRM forms
- Talking to IT and legal

NOT FOR

- A final legal opinion

Our advice: Ask a Baku law firm two yes/no questions before scaling AI: (1) does our customer consent cover processing by foreign AI providers, and (2) is any of our data subject to localisation? Until then, keep customer data RED.

Privacy and data details

plan · sources

Key points, as reported by law firms: (1) processing personal data generally needs the person's written consent, which may also be an electronic document with an enhanced e-signature (Gratanet, Sep 2024). (2) Passing data to others or abroad generally needs written consent unless the law says otherwise (Art. 13.1). One 2026 firm says transfers abroad need 'adequate protection' in the receiving country. (3) Personal data information systems must be registered; the regulator is the Ministry of Digital Development and Transport. (4) One firm (VLO, Apr 2026) reports that certain financial, telecom and public-sector data must stay on servers in Azerbaijan; this is not confirmed elsewhere. (5) New platform rules adopted 5 Aug 2026 apply to social networks, not to retailers. GDPR applies if we offer goods or services to people in the EU or track their behaviour. Practical result: no customer names, phones or purchase histories in any cloud AI.

Plan and price: Free to read. Legal review by a Baku law firm is extra.

WHAT TO AVOID · SAFETY

Free and personal AI apps, and hosted DeepSeek (what to avoid)

Free chat apps (DeepSeek's site and app, and personal free accounts of ChatGPT, Claude and Gemini) that many people already use privately.

WHAT IT MEANS FOR YOU

This is the real leak risk your team worries about. Banning them only works if a business plan is available instead.

Skip · 5 min to write the rule · Free · ◆ In our library, with test notes

● Red — Personal and free accounts may train on chats; DeepSeek stores data in China. No company data here.

China
where DeepSeek stores user data

Opt-out
training on free/personal accounts of the big apps

Company only
the rule: company work on company AI accounts

Try this before Friday

exercise · 5 min to write the rule

> Each person lists which AI apps they already use and on which account (work or personal). This list is the starting point for the red-list rule.

Should we use it?

good for · not for · advice

GOOD FOR

- Nothing with company data

NOT FOR

- Turnover, customer lists, supplier prices, unreleased collections, staff data

Better option? Copilot Chat (free with Microsoft 365) or one paid team plan.

Our advice: Write one clear rule for Friday: company work only on company AI accounts, nothing confidential in any free app.

Privacy and data details

plan · sources

DeepSeek's privacy policy stores data on servers in China and allows inputs to be used to improve its technology. Hundreds of companies and several governments have banned it. Free and personal tiers of ChatGPT, Claude and Gemini may train on chats unless the user opts out. DeepSeek's open weights (MIT) are fine ONLY when run on your own machine.

Plan and price: Free

Library id: `a15d879010` — In our library, with test notes

Website: deepseek.com

REDACTION TECHNIQUE · SAFETY

Anonymise before you paste (placeholders, Presidio, rizzo-pii)

Replace real names, phones and amounts with placeholders like CLIENT_1 or AMOUNT_A before pasting, then put the real values back yourself. Presidio and rizzo-pii are free tools that do this automatically.

WHAT IT MEANS FOR YOU

Lets the team use AI on real work (a complaint reply, a sales comment) without exposing anyone. The catch: Presidio only knows English out of the box and rizzo-pii is built for Italian, so for Azerbaijani and Russian, do it by hand.

Try — for manual placeholders now; tools only for English text or a later IT project | 15 min to learn the habit

Free | ◆ In our library: reviewed, not run on real files

● Amber — Safe when done right; the key file linking placeholders to real values never leaves your PC.

English only	22	Free
out-of-the-box language support in Presidio	kinds of personal data rizzo-pii hides (Italian-tuned)	open source; the manual method costs nothing

+ Try this before Friday

exercise · 15 min to learn the habit

> Write a made-up customer complaint in Russian ('Айгюн Мамедова, +994 50 123 45 67, купила сервиз за 2 400 AZN...'). Replace the details with CLIENT_1, PHONE_1, AMOUNT_1, ask Copilot Chat for a polite reply, then put the real values back. Time it. Then try an English version in the Presidio demo and see what it catches.

+ Should we use it?

good for · not for · advice

GOOD FOR

- Customer-service reply drafts
- Analysing feedback without names
- Sharing an example with AI

NOT FOR

- Azerbaijani or Russian text with automatic tools (not supported out of the box)
- Treating automatic redaction as 100% reliable

Our advice: Teach the manual method on Friday; it covers most cases. Do not adopt rizzo-pii yet (our library review ran no real files), but adopt the habit: mask names, phones and figures before pasting into any AI.

+ Privacy and data details

plan · sources

With placeholders, the AI never sees the real person or figure, and the key linking placeholders to real values stays in a file on your PC. Presidio and rizzo-pii run on your own machine. Presidio's public demo is on Hugging Face, so put only made-up text into it. Presidio itself warns that automatic detection cannot guarantee it finds everything. rizzo-pii: masked text still goes to the cloud AI, so turnover figures and context words are not hidden unless they match its 22 data types.

Plan and price: Free (open source). The manual method costs nothing.

Library id: `6bd954d1f1` — In our library: reviewed, not run on real files

LOCAL AI APP · SAFETY

LM Studio / llama.cpp: AI that runs on your own computer

A free desktop app for Mac and Windows that downloads an open AI model (Gemma, Qwen) and runs it on your own computer, so nothing you type goes to the internet.

WHAT IT MEANS FOR YOU

The answer to 'what about really secret numbers?': summarise a turnover table or VIP notes offline. The catch: it needs a strong laptop, and small local models are clearly weaker, especially in Azerbaijani.

Try — for RED data that must stay on the machine (turnover tables, internal notes)

30 min plus a large download | Free | ◆ Tested by us 12 Oct 2026 (llama.cpp, made-up mails)

● Green Text is processed on the laptop; keep the optional cloud features switched off.

3 of 5	7 of 9	~3 s
Azerbaijani mails sorted right by a tiny local model (our test)	Russian mails right, same test	per mail on 2 CPUs

+ Try this before Friday

exercise · 30 min plus a large download

> On a recent Mac or a PC with 16 GB of memory or more, install LM Studio and download a small model (Gemma 4 or Qwen, about 4–7 GB). Turn Wi-Fi off. Paste a made-up table of 5 boutiques with fake monthly sales and ask 'which boutique fell most, give 3 possible reasons' in Russian. Judge quality and speed.

+ Should we use it?

good for · not for · advice

GOOD FOR

- Summarising confidential tables
- Removing names and figures before pasting into a cloud AI
- Working without internet

NOT FOR

- Final Azerbaijani marketing copy
- Old or 8 GB laptops

Better option? For heavy private use, a mid-size Qwen model on the company server via Open WebUI.

Our advice: Do not roll it out to everyone. One or two analysts with good laptops are enough for the RED jobs. Use it as the 'safe room' in the paste rules: confidential text goes here, public text goes to the cloud tools.

+ Privacy and data details

plan · sources

LM Studio's privacy policy (effective June 2026) says messages, chat histories and documents are never sent from your computer when you run models locally, and the app has no telemetry. Only model searches and update checks (app version, OS, IP address) go online. Paid cloud features send prompts out, so do not switch them on. Models download from Hugging Face; each has its own licence (Qwen mostly Apache-2.0). Do not install it on shared or personal PCs.

Plan and price: Free for personal and internal business use since July 2025 (llama.cpp: MIT). A paid Enterprise plan adds SSO and model controls. Hardware is the cost: a good 27B model's 4-bit file is 16.5 GB, a poor fit for a 16 GB Mac.

Library id: `17b46de13a` — Tested by us 12 Oct 2026 (llama.cpp, made-up mails)

Sources

- lmstudio.ai/blog/free-for-work
- lmstudio.ai/app-privacy
- simonwillison.net/2025/Jul/8/lm-studio-is-free-for-use-at-work

Website: lmstudio.ai

BUSINESS PLAN VS CONSUMER · SAFETY

Gemini in Google Workspace (and the personal-Gmail trap)

Google's AI is protected only when used through a paid company Google Workspace account. On a personal Gmail it runs under consumer rules.

WHAT IT MEANS FOR YOU

Italdizain runs on Microsoft 365, so the risk is SMM staff using Gemini or NotebookLM on personal Gmail for work. A business setup would mean paying for a second office suite.

Worth a look later | 10 min to check accounts | €6.80–21.10/user/mo

Amber Personal Gmail: chats can train Google's models and be read by reviewers. Public material only.

6 Oct 2026	Up to 3 years	72 h
Workspace privacy hub last updated	how long human-reviewed personal Gemini chats are kept	personal-account retention with Keep Activity off

Try this before Friday

exercise · 10 min to check accounts

> Everyone checks which Google account their Gemini, NotebookLM or AI Studio is signed into. If it is a personal Gmail, use it only for GREEN (public) material, for example 'write 5 hooks for a TikTok about Italian table settings'.

Should we use it?

good for · not for · advice

GOOD FOR

- Teams already on Google Workspace

NOT FOR

- Company work on personal Gmail accounts

Better option? Copilot Chat covers the same needs inside Microsoft 365.

Our advice: Add one line to the policy: 'Google AI tools only with public data unless we buy Workspace'. Do not buy Workspace just for Gemini.

Privacy and data details

plan · sources

With a qualifying Workspace account, Google says it does not use prompts or content to train models without permission, and chats are not reviewed by humans; Gemini in Workspace lists ISO 42001, SOC 1/2/3 and ISO 27001/27701. On a personal Gmail, consumer terms apply: with 'Keep Activity' on, chats and uploads can be used to improve Google's services including training, and a subset is read by reviewers and kept up to 3 years (Gemini Apps privacy hub, 24 Sept 2026). Our library notes the free Gemini API tier also uses inputs to improve Google's products.

Plan and price: Workspace Business Starter €6.80, Standard €13.60, Plus €21.10 per user per month (workspace.google.com, Oct 2026). Gemini is included.

Sources

TECHNICAL BLOCKING (IT) · SAFETY

Microsoft Purview DLP for Edge and Copilot

An IT setting in Microsoft 365 that spots sensitive data (card numbers, IBANs, labelled files, chosen keywords) and blocks it from being typed or uploaded into ChatGPT, Gemini, Copilot and other AI sites.

WHAT IT MEANS FOR YOU

Turns the paste rules into a real barrier, so a tired employee cannot leak a client list by accident. The catch: it needs company-managed Windows PCs (Intune), Purview billing and an IT person.

Try — for an IT pilot on a few company PCs, in simulation mode first ⏱ Half a day for IT

Purview licence / pay-as-you-go

● Green Runs inside your own Microsoft 365; a guardrail, not permission to paste RED data.

29 Jul 2026	Intune	Simulation
Microsoft Learn guide last updated	devices must be managed by Intune	mode to test first without blocking anyone

+ Try this before Friday

exercise · Half a day for IT

> Ask IT one question before Friday: 'Are our PCs Intune-managed and do we have Purview DLP?' In the meeting, show the Microsoft Learn example (block bank numbers and SWIFT codes in AI prompts).

+ Should we use it?

good for · not for · advice

GOOD FOR

- Blocking card, bank and ID numbers in AI prompts
- Stopping Copilot from reading files labelled 'Confidential'
- A custom keyword list such as 'dövriyyə', 'оборот', 'turnover'

NOT FOR

- Personal phones and unmanaged laptops
- Spotting turnover figures with no pattern, unless you build custom rules

Better option? Browser DLP extensions (Strac, Nightfall) if Intune and Purview are not available.

Our advice: Start with sensitivity labels ('Confidential – no AI') on turnover files and a Copilot DLP rule. Add blocking on AI websites only after a month in simulation.

+ Privacy and data details

plan · sources

The browser checks the prompt on the PC and stops matches before they are sent. Purview runs inside your Microsoft 365. When set to block, other browsers (Firefox, and Chrome without the Purview extension) are blocked on managed PCs. An admin can also set a Purview rule that blocks Copilot prompts containing chosen sensitive data (rolled out spring 2026).

Plan and price: Pay-as-you-go or per-user Purview licensing, depending on the feature. Blocking Copilot from labelled files originally required a Copilot licence plus E5 or equivalent. Business Premium coverage is unconfirmed; check in the Purview portal.

Website: learn.microsoft.com/en-us/purview/dlp-create-policy-block-to-ai-via-edge

PASTE-BLOCKING EXTENSION · SAFETY

Browser DLP extensions (Strac, Nightfall)

Company browser add-ons that watch what you paste or upload into ChatGPT, Claude, Gemini or Copilot and block, mask or warn before it is sent.

WHAT IT MEANS FOR YOU

A route if Purview is not available. Works in Chrome, Edge, Firefox and Safari. The catch: prices only via sales, IT must push the extension, and free look-alike extensions are a risk themselves.

Worth a look later | A demo call plus 1 hour for IT | Quote only

● Amber The vendor's console sees snippets of what it flags; ask for SOC 2 report and DPA.

100+	SOC 2 + ISO 27001	7 days
types of sensitive data Strac says it detects	claimed by both vendors	Nightfall proof-of-value trial

+ Try this before Friday

exercise · A demo call plus 1 hour for IT

> No install before Friday. Look at Strac's page and note which AI sites and actions (block, redact, alert) it lists, so the meeting can compare it with Purview.

+ Should we use it?

good for · not for · advice

GOOD FOR

- Teams without Intune or Purview
- Covering many AI sites at once

NOT FOR

- Small budgets (quote only)
- Catching business secrets that have no pattern

Better option? Microsoft Purview, if your licences cover it; it is already in the house.

Our advice: Treat Strac or Nightfall as plan B. Avoid tiny free paste-guard extensions: they ask for clipboard and all-site access and can become the leak.

Privacy and data details

plan · sources

The extension reads what you type and paste on AI sites, and sends findings to the vendor's console, so the vendor sees snippets of your data. Ask for their SOC 2 report and DPA. Avoid tiny free extensions (some have 2 users and version 0.1).

Plan and price: Strac: book a demo, no public price. Nightfall: Foundation and Premier editions priced per user per year, quote only, 7-day proof of value.

Sources

- strac.io/integrations/browser-dlp
- nightfall.ai/pricing
- addons.mozilla.org/addon/strac-browser-dlp/

Website: strac.io/integrations/browser-dlp

C) CONTENT · 10 TOOLS

Content creation

Content work almost never needs turnover or customer lists, so those never go into a content tool. Product photos already on italdizain.az and Instagram are public and low-risk. Green tools: Canva Business and Adobe Firefly (plus the chat plans in the models section). Amber: Photoroom (switch training off), Claid, Google Gemini/Flow on personal accounts, Runway. Red: Midjourney (public by default), Kling (training and commercial-use limits), CapCut (perpetual licence over uploads). For a luxury brand, every AI product image is compared with the real item before it goes out.

DESIGN AND SOCIAL POSTS · CONTENT

Canva Business (Magic Studio)

Online design tool with AI built in. It makes posts and stories, resizes one design for every channel, removes backgrounds, writes captions and keeps your brand kit.

WHAT IT MEANS FOR YOU

Probably the fastest daily win for the SMM team: brand kit plus one-click resizing for Instagram, Facebook and TikTok. Canva says Business content never trains its AI. The catch: IP indemnity is for eligible Enterprise customers only.

Try now | 30 min to start | ~$25/user/mo

Green Business/Teams: content never used for AI training. Free and Pro: training on by default.

Never	~$25	SOC 2 + ISO 27001
Business content used for AI training (Canva's statement)	per person per month, Business (third-party)	listed on Canva's security page

Try this before Friday

exercise · 30 min to start

> Build a Brand Kit with the Italdizain logo, colours and fonts. Take one product photo already published on italdizain.az, make a post with Magic Design, then use Magic Resize to make a story, a TikTok cover and a Facebook post. Time it against the usual way.

Should we use it?

good for · not for · advice

GOOD FOR

- Social posts, stories and covers in many sizes
- Keeping brand fonts and colours consistent
- Simple promo videos and banners

NOT FOR

- Photo-real luxury product imagery
- Anything needing IP indemnity unless on Enterprise

Our advice: Everyone must work inside one company Business team, not personal Free or Pro accounts. Personal accounts are where AI training is on by default. Check the privacy toggle shows as disabled.

Privacy and data details

plan · sources

Where data goes: Canva's cloud; Canva does not publish the country. Training by plan: Teams, Business, Enterprise and Education: Canva says content is not used to improve its AI, this cannot be switched on, and third-party AI providers may not train on it either. Free and Pro: training is ON by default and must be switched off in Privacy settings. Certifications: SOC 2 Type II and ISO 27001. Indemnity: Canva Shield covers eligible Enterprise customers only. Do not put turnover, prices not yet public, customer names or photos into designs. (Canva's pages block automated reading; facts from Canva search snippets.)

Plan and price: Business about $25/user/month or $250/user/year, no seat minimum (third-party 2026 guides; Canva's pricing page could not be read). Pro $18/month is for a single person only. Enterprise: price on request.

Website: canva.com/

Adobe Firefly (with Express, Photoshop and Firefly Boards)

Adobe's AI for images, video and design. Its own models are trained only on licensed content. Our library's technique: send a supplier packshot from Photoshop to Firefly Boards, generate a luxury scene around it, then blend the product back in.

WHAT IT MEANS FOR YOU

The most luxury-safe generator: lifestyle backgrounds around your real packshots, Content Credentials labels, and IP indemnity for enterprise customers. The catch: partner models (Runway, Kling, FLUX) are 'check yourself', and fine jewellery details can change.

Try now | 30 min per product photo | From €18.48/seat/mo

◆ In our library: read through, not hands-on tested

● Green Adobe says it never trains Firefly on user content, including partner models inside its apps.

€18.48	Never	Enterprise only
per team seat per month (excl. VAT)	user content used to train Firefly (Adobe)	IP indemnity

+ Try this before Friday

exercise · 30 min per product photo

> Take one public packshot from italdizain.az, for example a vase or a watch. In Firefly or Photoshop (Firefly Boards), generate three backgrounds: a marble console, a Caspian-view terrace and dark velvet. Use only Adobe's own 'Firefly Image' model. Zoom to 200% and check the logo, engraving and colour are untouched.

+ Should we use it?

good for · not for · advice

GOOD FOR

- Lifestyle and campaign backgrounds around real products
- Brand-safe images for ads
- Short videos and resizing in Adobe Express

NOT FOR

- Catalogue-exact white-background shots (use Photoroom)
- Relying on partner-model output for final ads

Our advice: Use Adobe's own Firefly models for anything you publish, and keep partner models for ideas. Make 'compare with the original before publishing' a fixed step. If the team adopts it widely, ask Adobe for an enterprise plan with indemnity in writing.

+ Privacy and data details

plan · sources

Training: Adobe says it does not train, and never has trained, Firefly on user content, and customer content is not used to train generative models, including partner models inside Adobe apps. Abuse

review: prompts and results may be checked automatically or by people (Gen AI guidelines, 15 May 2026); non-generative features such as masking learn from content unless you opt out. Legal cover: Adobe's own models are 'commercially safe'; for partner models you check suitability yourself. IP indemnity covers eligible enterprise customers only; a community expert (Sept 2026, not official) reports it covers Firefly, Google and OpenAI models but not Runway, Kling, Black Forest Labs or 'beta' features. Data location: not published. Do not upload unreleased collections until the plan is confirmed.

Plan and price: Team plans per licence per month (excl. VAT, annual): Firefly Pro for teams €18.48 (4,000 credits), Pro Plus €46.21, Premium €184.86. Individual: Standard €11.17, Pro €22.36. A limited free plan exists. (Adobe plans page, 13 Oct 2026.)

PRODUCT PHOTOS AND PACKSHOTS · CONTENT

Photoroom

App and API that cut products out, put them on clean or styled backgrounds, add shadows and batch-produce catalogue images.

WHAT IT MEANS FOR YOU

Fast, consistent packshots for the website and marketplaces across many brands, with up to 50 team seats per plan. The catch: data is hosted in the US, and self-serve plans train on images until you switch it off.

Try now | ⏱ 30 min to start | ~$13–35/mo | ◆ In our library (vendor card, not hands-on tested)

● Amber Switch the training toggle off first; US hosting only. Public product photos are fine.

US only	Opt-out	50 seats
data hosting	training on self-serve plans	maximum per paid plan

+ **Try this before Friday** exercise · 30 min to start

> First switch the training toggle off. Then take 5 public product photos from the website (a watch, a glass, a cushion, a vase, a lamp), run a batch white background with soft shadow, and check logos and engravings at 200% zoom.

+ Should we use it?

good for · not for · advice

GOOD FOR

- White-background catalogue shots
- Marketplace and website images in bulk
- Simple styled backgrounds

NOT FOR

- Unreleased products before opting out of training
- Teams that need EU data residency

Our advice: Good for the bulk catalogue work that eats time. Its Enterprise fidelity check flags when AI changed the product, which matters for jewellery and watches.

+ Privacy and data details

plan · sources

Training by plan (Photoroom security page, 2026): Enterprise: no training unless agreed in writing. Self-serve API: used for training by default, with an opt-out. App users: a separate opt-out toggle, and personal data is anonymised before any training. Retention: sync API images discarded straight away, operational logs after 15 days, access logs after 1 year. Hosting: US (GCP and AWS), no EU-only residency. SOC 2 Type 2, scoped to the API (April 2026). DPA for Enterprise.

Plan and price: Pro (8,000 AI credits), Max (25,000) and Ultra (75,000), each with up to 50 seats. Prices show only at checkout; third-party figures put Pro at about $12.99/month and Max at about $34.99/month. Enterprise is custom with SSO and an SLA.

PRODUCT PHOTO FIXING · CONTENT

Claid.ai

Product-photo AI that upscales, fixes lighting, removes backgrounds, adds shadows and generates 'AI photoshoots' around your real product.

WHAT IT MEANS FOR YOU

Useful for rescuing low-quality supplier photos. The catch: no security certificates published, and a vague privacy policy from 2024.

Try — for improving supplier photos that are already public | 20 min | 50 free credits

● Amber No SOC 2/ISO, training on uploads not stated. Upload only images already public.

50	May 2024	None found
free trial credits	date of current privacy policy	SOC 2 / ISO certificates

+ Try this before Friday

exercise · 20 min

> On the free 50 credits, upload 3 low-resolution supplier photos that are already on the website. Run Upscale, light correction and AI Shadows, then compare before and after side by side.

+ Should we use it?

good for · not for · advice

GOOD FOR

- Upscaling small supplier images
- Fixing light and shadows

NOT FOR

- Unreleased products
- Anything needing a signed DPA without asking first

Better option? Photoroom has clearer published security terms.

Our advice: Use it as a fixer, not a main platform. Before any paid plan, ask Claid in writing whether uploads train its models.

+ Privacy and data details

plan · sources

Under its privacy policy (effective 21 May 2024), Claid acts as a data processor and says it does not sell, share or rent account data. Data is kept 'as long as we deem necessary'; California law applies; server location not stated. Training on uploads: not stated. No SOC 2 or ISO 27001 found on its site.

Plan and price: Free trial with 50 credits. Essentials and Pro are paid (prices not readable); Business is custom. AI photoshoot 4 credits, 5 s video 60 credits, background removal 1 credit.

AI VIDEO AND IMAGES · CONTENT

Google Gemini (Nano Banana) and Flow (Veo 3.1)

Google's image model (Nano Banana) and video model (Veo 3.1), used in the Gemini app and Flow. They make realistic images and short clips with sound.

WHAT IT MEANS FOR YOU

Among the best-looking models for reels. The catch: Italdizain runs on Microsoft, not Google Workspace, so you would use personal Google accounts, where uploads can train Google's models and be read by reviewers.

Try — for ideas and mood clips with made-up or already-public material | 20 min | ~$19.99/mo (AI Pro)

◆ Prompt galleries checked by us

● Amber Personal Google accounts may train on uploads; made-up or public material only.

Up to 3 years	13 of 141	~$19.99
how long reviewed chats are kept	prompt-gallery examples that are product-related (our library check)	per month, Google AI Pro

+ Try this before Friday

exercise · 20 min

> On a test Google account with Keep Activity off, generate 3 clips of a made-up 'candle-lit dinner table with crystal glasses' using no real product photos. Judge whether the look fits Italdizain.

+ Should we use it?

good for · not for · advice

GOOD FOR

- Mood clips and ideas for reels
- Testing visual concepts

NOT FOR

- Real unreleased products
- Company workflow on personal accounts

Better option? Adobe Firefly, which offers the same Google models under Adobe's no-training terms.

Our advice: If you buy Adobe Firefly, use Nano Banana and Veo inside Firefly instead. Don't build a workflow on personal Google accounts. The public Nano Banana prompt galleries are a source of ideas, not recipes: their licence is contradictory.

+ Privacy and data details

plan · sources

Personal accounts (Gemini Apps privacy hub, 24 Sept 2026): with 'Keep Activity' on, Google uses chats and uploaded photos and videos to improve its services, including training generative AI. A

subset of chats is read by reviewers and kept up to 3 years. With Keep Activity off, chats are kept 72 hours. Outputs carry an invisible SynthID watermark. Do not upload unreleased products, staff or customer faces.

Plan and price: Google AI Pro about $19.99/month with 1,000 Flow credits; a 10-second Veo 3.1 clip uses about 125 credits (third-party guides). Some free daily credits exist.

Library id: `2c30995dbf` — Prompt galleries checked by us

Website: labs.google/fx/tools/flow

AI VIDEO STUDIO · CONTENT

Runway

AI video studio that turns images and text into short clips, and extends, restyles and edits footage.

WHAT IT MEANS FOR YOU

Strong creative control for reels and mood videos. The catch: on normal plans, your uploads and results may be used to train Runway's models under a permanent licence. Only an Enterprise contract excludes this.

Try — for test clips and mood videos from already-public images | 20 min | From $12/mo

Amber — Self-serve terms allow training on inputs and outputs (irrevocable licence). Public images only.

Irrevocable	$12	SOC 2 + ISO 27001
training licence on inputs/outputs (self-serve)	per month, Standard (annual)	security certifications

Try this before Friday

exercise · 20 min

> Take one campaign image already on Italdizain's Instagram and make a 5-second slow push-in clip on the free credits. Check whether the product shape or logo changes.

Should we use it?

good for · not for · advice

GOOD FOR

NOT FOR

- Animating a still campaign image
- Mood and teaser clips

- Unreleased collections
- Anything confidential on self-serve plans

Better option? Adobe Firefly video, for brand-safe terms.

Our advice: Fine for experiments. If video becomes a big part of the plan, ask for Enterprise terms in writing, or use Adobe Firefly video instead.

+ Privacy and data details

plan · sources

Terms of Use (15 Sep 2026): inputs and outputs 'may be used by the Company to train and improve its AI models', under an irrevocable, perpetual, sublicensable licence. Separate Enterprise Services Terms apply to Enterprise customers. Security page (Aug 2026): SOC 2 Type II and ISO 27001. Data location: not stated. You own outputs; commercial use allowed.

Plan and price: Free: 125 one-time credits. Standard $12/month annual or $15 monthly, 625 credits (about 52 s of Gen-4.5). Higher tiers and Enterprise (custom).

Website: runway.com/

MOOD BOARDS AND CONCEPT ART · CONTENT

Midjourney

A popular image generator known for artistic, editorial looks. Mainly used for mood boards and concepts.

WHAT IT MEANS FOR YOU

Great for mood boards for shoots, window displays and interiors. The catch: everything is public by default, companies over $1M revenue must pay for Pro or Mega, there is no indemnity, and its training data is legally disputed.

Try — for internal mood boards from text prompts, never published as final ads | 15 min | From $60/mo

● Red Images and prompts are public by default. Never upload products or faces.

Public	$60	None
default visibility of your images	per month minimum for a company like Italdizain	IP indemnity

Try this before Friday

exercise · 15 min

> There is no free plan. Only someone who already has an account should build a mood board for a made-up 'Venetian Christmas' window from text prompts, with no uploads. Everyone else browses the public Explore gallery and judges the style.

Should we use it?

good for · not for · advice

GOOD FOR

- Mood boards
- Concept images for shoots and displays

NOT FOR

- Uploading products or faces
- Final published ads

Better option? Adobe Firefly for anything that will be published.

Our advice: Keep it for inspiration only. For anything that will be published, re-create the idea in Adobe Firefly.

Privacy and data details

plan · sources

By default your images and prompts are publicly viewable and can be remixed. Stealth Mode only on Pro ($60) and Mega ($120); it is 'best efforts', and images made in shared Discord channels stay visible. No security certificates found, no user indemnity. Disney and Universal sued Midjourney in June 2025, so publishing its output carries IP risk. (Terms page blocks automated reading; via search snippet.)

Plan and price: Pro $60/month, Mega $120/month, 20% off yearly; required for companies over $1M revenue (Midjourney plans page).

AI VIDEO · CONTENT

Kling AI

Video generator from China's Kuaishou that makes realistic clips from text or images. It is also offered inside Adobe Firefly and Higgsfield.

WHAT IT MEANS FOR YOU

High video quality, but its terms don't fit a luxury brand: inputs can train its models, outputs must carry a Kling label, and commercial use needs written permission.

Skip | 10 min to read terms | Not checked

Red Terms allow training on your inputs and forbid commercial use without written permission.

21 Apr 2026	Required	Written permission
terms date	'Kling AI' label on outputs	needed for commercial use

Try this before Friday

exercise · 10 min to read terms

> Don't use it. Read sections 4.5 to 4.7 of the terms (10 minutes) and bring them to Friday as an example of what to look for in any AI tool's terms.

Should we use it?

good for · not for · advice

GOOD FOR

- Learning what risky AI terms look like

NOT FOR

- Any Italdizain brand content

Better option? Adobe Firefly video or Runway.

Our advice: If someone loves the look, test it only inside Adobe Firefly with made-up prompts, and never publish the result as a final ad.

Privacy and data details

plan · sources

Kling Terms of Service (21 Apr 2026): section 4.7 gives Kling a licence to host, reproduce, modify and distribute inputs and outputs, and to use input to train its models (revocable by emailing support). Section 4.5: outputs must be labelled 'Kling AI'. Section 4.6: no commercial use without written permission. Paid-service terms may differ (not checked). Through Adobe Firefly, Kling is a partner model not covered by Adobe's indemnity.

Plan and price: Not checked (it is skipped).

Website: klingai.com/

VIDEO EDITING · CONTENT

CapCut

Video editor from ByteDance, the owner of TikTok, with AI captions, templates, auto-cut and effects. Many SMM teams already use it.

WHAT IT MEANS FOR YOU

Probably already on your team's phones. Its terms give it a permanent, transferable licence over your uploads, including people's likeness, and its music is not cleared. Brand work should move to a safer editor.

Skip | 30 min to compare | Free / paid

● Red — Perpetual, sublicensable licence over uploads incl. faces. No unreleased products or people.

Perpetual	15 Apr 2026	Not licensed
licence over your uploads	terms date	music for your use

+ Try this before Friday

exercise · 30 min to compare

> Everyone who uses CapCut lists recent projects that contained unreleased products or people. Then re-make one recent reel in Adobe Express or Canva and compare the time it takes.

+ Should we use it?

good for · not for · advice

GOOD FOR

- Personal or already-public content only

NOT FOR

- Unreleased products
- People's faces
- Ads with CapCut music

Better option? Adobe Express or Canva Business video tools.

Our advice: Don't ban it overnight. Agree that brand and unreleased material moves to Adobe Express, Premiere or Canva video, and that CapCut music is never used in ads.

+ Privacy and data details

plan · sources

Terms (15 Apr 2026, section 10): users grant a non-exclusive, royalty-free, transferable, sublicensable, perpetual, worldwide licence to modify, reproduce, publish and distribute their content, including username, image and likeness, also in sponsored content, surviving after you stop using the app. AI training is not mentioned explicitly. No rights to sound recordings are licensed.

Plan and price: Free and paid plans (prices not checked, since it is skipped).

- larryjordan.com/articles/caution-capcut-changed-their-license-and-m... (commentary)

Website: capcut.com/

BRAND VOICE SETUP · CONTENT

Brand-voice assistant and shared prompt library

One saved assistant (a Claude Project or Skill, a Custom GPT, or a Copilot agent) that already knows Italdizain's tone, banned words, hashtags and language rules, plus a shared folder of tested prompts everyone reuses.

WHAT IT MEANS FOR YOU

Every person gets on-brand drafts without re-explaining, and the red list lives inside the assistant. The catch: someone must own and update it, or it goes stale.

Try now | 1 hour for a first version | Included in chat plan | ◆ Related skills repo tested by us

● Green — Only as safe as the plan it runs on: build it on a business plan, with public brand material only.

0 extra	View-only	1 page
cost on top of the chat plan	shared Claude Skills for colleagues	voice guide in AZ/RU/EN with do and don't examples

+ Try this before Friday

exercise · 1 hour for a first version

> Each team member writes down the 3 prompts they would use most. Merge them into one page with the brand voice rules and the red list, load it into the tool you are testing, and have two people run the same prompt to see if the results match.

+ Should we use it?

good for · not for · advice

GOOD FOR

- A 1-page voice guide in AZ/RU/EN
- A red list: never paste turnover, client names or phones, VIP lists, supplier prices
- Ready prompts for captions, SEO meta texts, ad variants

NOT FOR

- Storing customer lists or sales figures inside the assistant

Better option? Anthropic's public skills repo as a pattern book (our test: useful as templates, not to install wholesale).

Our advice: Give it one owner, put a version date on it, and check every quarter which prompts people actually use.

+ Privacy and data details

plan · sources

Build it on Claude Team, ChatGPT Business or Copilot, never on personal accounts. Put only public brand material in it: tone, sample posts, product facts from the website. On Claude Team, admins can push a Skill to all users; shared Skills are view-only, and access ends when someone leaves. One third-party blog says org-wide sharing has no approval step, so keep the sharing setting tight.

Plan and price: Included in Claude Team, ChatGPT Business or Copilot. No extra cost.

Website: support.claude.com/en/articles/12512180-using-skills-in-claude

D) SEO & WEB · 10 TOOLS

SEO, website and AI search

Most SEO and AI-search work runs on public information, so it is low risk. A public check of italdizain.az on 13 Oct 2026 found GA4, Yandex Metrica and the Meta Pixel; robots.txt blocks no AI bots; sitemap.xml redirects to the homepage (no working sitemap); the English homepage has no structured data, no language tags linking AZ/RU/EN and no main H1. Google says there is no special trick for its AI answers: good normal SEO is enough. Start with the free AI in Search Console, GA4 and Bing, then pick one paid suite (Semrush) and one AI-visibility tracker (Otterly).

FREE GOOGLE ANALYTICS AI · SEO & WEB

Google Search Console AI setup + GA4 Analytics Advisor

Ask Google's own tools questions in plain words, like 'which pages lost clicks from mobile last month?', and get the report built for you.

WHAT IT MEANS FOR YOU

italdizain.az already runs GA4, so this is AI on data Google already holds, with no new company involved. The catch: the GA4 Advisor works only with the interface in English, and both features are still beta or experimental.

Try now | 15 min to start | Free

● Green Data stays inside Google; nothing new is shared. Don't upload sales or 1C files into GA4.

G-SK931H32DT	English only	Dec 2025
GA4 tag found on italdizain.az, 13 Oct 2026	GA4 Advisor interface language	Search Console AI setup announced (experimental)

+ Try this before Friday

exercise · 15 min to start

> In Search Console > Performance, type: 'Compare clicks for queries containing saat (watches) last 3 months vs previous 3 months, mobile only'. Check that the filters it set are right. In GA4, switch the interface language to English and ask Advisor: 'Why did sessions drop last week?'

+ Should we use it?

good for · not for · advice

GOOD FOR

- Weekly 'what changed' questions without building reports
- Finding which brand or category pages gain or lose search clicks

NOT FOR

- Anything involving turnover or customer lists
- Exporting data (the Search Console AI does not export)

Our advice: Make this the team's first step. Always check the filters the AI chose, because Google warns it can misread a request.

+ Privacy and data details

plan · sources

Your data stays inside Google. Search Console holds search questions and page clicks, not customer names. Google's help page says Advisor uses only data from that one GA4 property. Whether chats are used to train models is not stated (unknown). Do not upload sales or 1C files into GA4 to 'help' the AI.

Plan and price: Free (Search Console and GA4 standard)

AI-SEARCH VISIBILITY, FREE · SEO & WEB

Bing Webmaster Tools – AI Performance report

A free report showing how often Microsoft Copilot and Bing's AI answers cite your website as a source, and for which questions.

WHAT IT MEANS FOR YOU

The only free, first-hand count of AI citations for italdizain.az. The catch: it covers Microsoft's AI only (not ChatGPT or Google), shows no clicks, and is still a public preview.

Try now | 20 min to start | Free

Green You only prove you own the website; the report uses public web data.

10 Feb 2026	0	None
launched (public preview)	click data shown	working sitemap on italdizain.az today (sitemap.xml redirects home)

Try this before Friday

exercise · 20 min to start

> Add italdizain.az to Bing Webmaster Tools (import it from Google Search Console in a few clicks). Open the AI Performance report and write down the top 5 'grounding queries' (the questions the AI used to find your pages).

Should we use it?

good for · not for · advice

GOOD FOR

- Seeing which pages AI already trusts
- Tracking whether content changes earn more AI citations

NOT FOR

- ChatGPT or Google AI visibility
- Measuring traffic from AI

Our advice: Set it up now even if there is little data yet; history builds up over time. Send Bing a sitemap once the website contractor creates one.

Privacy and data details

plan · sources

You only prove you own the website. The report is built from public web data. Nothing internal is sent to Microsoft.

Plan and price: Free

- searchinfluence.com/blog/bing-ai-performance-report-copilot-citations/

Website: blogs.bing.com/webmaster/February-2026/Introducing-AI-Performance-in-Bing-Webmaster-Tools-Public-Preview

ALL-IN-ONE SEO SUITE · SEO & WEB

Semrush (SEO + AI Search plans)

The big SEO toolbox: keyword research, competitor analysis, site audit, rank tracking, plus tracking of how ChatGPT, Gemini, Perplexity and Google AI mention your brand.

WHAT IT MEANS FOR YOU

One place for keywords, a site audit and AI visibility across Italdizain's brands. Its AI terms are the clearest in this group. The catch: $139–549 a month, and its keyword data for Azerbaijan is thinner than for big markets.

Try now | 30 min to start | Free plan; from $139/mo

Green — Does not train on what you type, nor let its AI suppliers. Public data only.

50	$45/mo	US
AI prompts tracked daily on Starter	per extra user	data storage

Try this before Friday

exercise · 30 min to start

> On a free account, run a Domain Overview for italdizain.az and two competitors. Then check its AI visibility for 'best luxury watch store in Baku'. Note whether Italdizain is mentioned.

Should we use it?

good for · not for · advice

GOOD FOR

- Keyword and competitor research in RU and EN
- Monthly AI-visibility check across ChatGPT, Gemini, Perplexity and Google AI

NOT FOR

- Internal sales data
- Very small budgets (start with the free plan)

Our advice: Pick Semrush or Ahrefs, not both. Semrush is the safer choice on AI training. Start on the free plan; pay for one month only if the team uses it weekly.

Privacy and data details

plan · sources

Semrush's AI terms say it does not train models on what you type and does not let its AI suppliers do so. Data stored in US data centres (AWS, Google Cloud). Security page shows PCI DSS Level 1; SOC 2 and ISO 27001 not stated on its own page. A DPA is published. Only public data is needed.

Plan and price: Free plan; SEO $139/mo; Starter $199/mo (50 AI prompts tracked daily); Pro+ $299; Advanced $549; extra users from $45/mo; about 17% less yearly.

- semrush.com/company/security/

Website: semrush.com/pricing/

AI-SEARCH VISIBILITY TRACKER · SEO & WEB

Otterly.AI

Asks ChatGPT, Google AI Overviews, Perplexity and Copilot your chosen questions every day and reports whether Italdizain or competitors are named and linked.

WHAT IT MEANS FOR YOU

The cheapest serious way to see what AI tells Baku shoppers about Italdizain and its brands. The catch: Gemini, AI Mode and Claude cost extra, and Azerbaijani-language questions are untested.

Try now | 30 min to start | From $29/mo

Green EU-hosted app (Frankfurt); you enter only public questions and competitor names.

$29/mo	4	Frankfurt
entry price	AI engines in every plan	app hosting

Try this before Friday

exercise · 30 min to start

> Start the free trial and add 10 questions in RU and EN, e.g. 'где купить Rolex в Баку' and 'luxury tableware store Baku'. Note who gets mentioned and which websites are cited.

Should we use it?

good for · not for · advice

GOOD FOR

- A baseline of AI answers before and after content changes
- Seeing which websites the AI cites, so you know where PR is worth doing

NOT FOR

- Precise traffic numbers
- Enterprise SSO below the custom plan

Better option? Peec AI (Berlin) is a similar EU option (prices not shown on its page). Profound is the enterprise option (SOC 2 Type II; est. $2,000–5,000/mo).

Our advice: Use the cheap Lite plan for 2–3 months to get a baseline before buying anything bigger. Pick questions real customers ask, not brand names only.

+ Privacy and data details

plan · sources

The app runs on AWS in Frankfurt (EU); public monitoring results are stored in the US. Otterly acts as a GDPR data processor; DPA and supplier list available from support. It does not claim its own SOC 2 or ISO; it points to AWS's certificates. You enter only public questions and competitor names.

Plan and price: Lite $29/mo (15 prompts); Standard $189 (100); Premium $489 (400); Enterprise custom; about 15% off yearly; free trial.

Website: otterly.ai/pricing

SITE CRAWLER + BULK AI · SEO & WEB

Screaming Frog SEO Spider with AI prompts

A desktop program that reads every page of your website and can run up to 100 AI instructions on each page, for example to write alt text or meta descriptions.

WHAT IT MEANS FOR YOU

Can draft image descriptions and page summaries for thousands of brand and product pages in AZ, RU and EN in one run. The catch: a bit technical, and each AI provider bills you separately.

Try now | 45 min to start | Free ≤500 pages; £199/yr

● Green Reads only the public site; AI steps follow your chosen provider's terms (use a business key).

100	500	£199/yr

custom AI prompts per crawl | pages free | licence

Try this before Friday

exercise · 45 min to start

> Download the free version and crawl italdizain.az/en/. Look at the 'H1' and 'Missing alt text' reports. Optional: add a Gemini key and run the built-in 'alt text' prompt on 20 pages.

Should we use it?

good for · not for · advice

GOOD FOR

- Alt text and meta descriptions at scale
- A full technical check of the site

NOT FOR

- People who want no setup at all
- Judging rankings (it only reads your own site)

Our advice: Have one person own it. Always review AI-written descriptions before publishing. Fix the basics first: our public check on 13 Oct found no main H1 on the English homepage, no working sitemap and no language tags linking AZ/RU/EN.

Privacy and data details

plan · sources

The crawler runs on your own computer and reads only the public website. AI prompts send page text to the provider you choose (OpenAI, Gemini, Anthropic, Azure OpenAI), or stay on your computer with Ollama or LM Studio. The vendor page says nothing about data handling, so the provider's terms apply. Use a business API key, not a personal one.

Plan and price: Free up to 500 pages; £199 per year per licence (cheaper from 5 licences); AI usage billed by the provider.

PRODUCT COPY AT SCALE · SEO & WEB

Product descriptions at scale, with a claims check

Use a business AI chat (Claude Team or ChatGPT Business) to turn a spreadsheet of product facts into SEO-friendly descriptions in Azerbaijani, Russian and English, in Italdizain's tone. Our library's E-commerce Visual Copywriting skill adds a check that holds back any claim not backed by proof.

WHAT IT MEANS FOR YOU

200+ brands means thousands of product and brand texts, and AI can draft them in three languages in hours. The catch: AI invents claims. In our test, the claim-check skill held back 4 of 8 unproven claims.

Try now | 30 min to start | $20–25/seat/mo | ◆ Tested by us (claim-check skill)

● Green Product facts are fine on a business plan; never purchase prices, margins, stock or customer names.

4 of 8	3	Off by default
unproven claims held back in our test	verified facts the plan was built on	model training on Team/Business plans

+ Try this before Friday

exercise · 30 min to start

> Make up a 5-row spreadsheet (brand, product, material, size, 3 true facts) plus a few tempting claims ('lead-free', 'bestseller'). Ask the AI for a 120-word description in AZ, RU and EN plus a title under 60 characters. Then ask: 'List every claim you made that is not in my facts.'

+ Should we use it?

good for · not for · advice

GOOD FOR

- Brand pages and product texts in three languages
- Checking supplier claims before they go on a product page
- Rewriting thin category pages

NOT FOR

- Final legal wording on certificates or guarantees
- Free personal accounts

Our advice: Write a one-page style guide (tone, banned words, brand rules) and paste it at the start every time. A native speaker checks the Azerbaijani before anything goes live. We tested the skill in English on one product only, and its own checker failed on the English file, so read its output.

+ Privacy and data details

plan · sources

Claude Team: no training on your content by default, SSO included; no custom retention controls below Enterprise. ChatGPT Business is also excluded from training by default (third-party sources; OpenAI's page could not be read). The skill itself is a local instruction file. Product facts are fine to use. Never include purchase prices, margins, stock levels or customer names. Free personal accounts are not allowed.

Plan and price: Claude Team $20/seat/mo yearly or $25 monthly; ChatGPT Business about $20–25/user/mo (third-party figures). The skill is free (MIT).

Library id: `89b612b53e` — Tested by us (claim-check skill)

AI DATA ANALYSIS · SEO & WEB

AI analysis of Search Console / GA4 data (exports first, Google Analytics MCP later)

Give a business AI chat your Search Console or GA4 numbers and ask it to find trends, problems and content ideas. Start with downloaded files; later connect it directly through Google's official read-only connector.

WHAT IT MEANS FOR YOU

Turns monthly reporting into a 10-minute conversation. The catch: Google's GA connector (an MCP) is experimental and needs Google Cloud setup by IT. There is no official Search Console connector; third-party ones route your data through outside companies.

Try — for Search Console and GA4 exports in a business-plan chat; no direct connections until IT reviews them

20 min with exports; 1–2 h of IT time for the connector

Free connector + chat seat

◆ In our library (card, not hands-on tested)

Amber Search phrases and clicks are low risk on a business plan; never mix in 1C turnover.

Read-only	None	10 min
GA MCP access	official Google Search Console connector	monthly report as a conversation

Try this before Friday

exercise · 20 min with exports; 1–2 h of IT time for the connector

> Export the last 3 months of Search Console 'Queries' and 'Pages' as CSV and upload them to a Team or Business chat. Ask: 'Which 10 pages have many views in Google but few clicks, and how should their titles change?'

Should we use it?

good for · not for · advice

GOOD FOR

- Monthly SEO reports
- Finding pages with weak titles

NOT FOR

- Sales or customer files
- Third-party hosted connectors without review

- Finding pages where shoppers drop off

Our advice: Exports are the safe first step. The GA MCP is a safe read-only experiment for later, set up on the company server so access details are saved centrally. Avoid third-party hosted connectors (Ryze, Porter Metrics, Open SEO MCP) until their terms are read.

+ Privacy and data details

plan · sources

Search Console exports hold search phrases and page clicks, not customer identities: low risk on Claude Team or ChatGPT Business (no training by default). Google's GA MCP runs on your own computer or Google Cloud with read-only access; results go to whichever AI chat you connect, so use a business plan. Never mix in 1C turnover.

Plan and price: Connector free (Apache-2.0); needs a Claude Team or ChatGPT Business seat and a Google Cloud project for the MCP.

Library id: `de1f3488d6` — In our library (card, not hands-on tested)

FREE AI SITE AUDIT · SEO & WEB

AI site-audit add-ons (jev-seo, Claude SEO)

Free add-ons that make Claude check a website against 50+ Google search rules and AI-search readiness, then produce a ranked fix list as PDF, Excel tracker and text report.

WHAT IT MEANS FOR YOU

A free first audit of italdizain.az to hand the website contractor. Our tests: jev-seo caught 9 of 11 planted faults with no false alarms in 5 seconds; Claude SEO caught 12 of 12. The catch: needs Claude Code (IT runs it), and scores are the model's own opinion.

Try now | 15–30 min (IT) | Free (~$0.01/site) | ◆ Tested by us 12–13 Oct 2026

● Amber Public pages only, but jev-seo's AI judgments go to an outside service (TypeSafe Jev API).

9 of 11	12 of 12	3 formats
planted faults caught by jev-seo, 0 false alarms	planted faults found by Claude SEO	PDF, Excel tracker and text report

Try this before Friday

exercise · 15–30 min (IT)

> Non-IT version: in a Claude Team chat, paste italdizain.az's robots.txt and the page source of one brand page and ask for an audit against Google's SEO basics and AI-search readiness, fixes by priority. IT version: run jev-seo's standard check on one public category page and bring the Excel tracker.

Should we use it?

good for · not for · advice

GOOD FOR

- A prioritised fix list for the web contractor
- Re-checking after fixes

NOT FOR

- Rankings or traffic data
- Long-term reliance: one maintainer

Better option? Screaming Frog for a full crawl; Semrush Site Audit if you buy Semrush.

Our advice: Treat the output as a checklist, not a grade. Start with the cheap standard check; skip paid full mode. Our test ran without the Jev key, so the paid AI judgments are untested.

Privacy and data details

plan · sources

It crawls public pages only; the free part runs on your machine. The AI judgments send page content to TypeSafe's Jev API, and the optional full mode uses DataForSEO; their training and retention terms are unknown, but this is public website content. No internal data is needed.

Plan and price: Free (MIT); jev-seo standard run about $0.01 per site in Jev credits; --full mode about $0.30 (DataForSEO).

Library id: `9840011542` — Tested by us 12–13 Oct 2026

Sources

- github.com/AgriciDaniel/jev-seo
- github.com/AgriciDaniel/claude-seo
- Library test 9840011542

Website: github.com/AgriciDaniel/jev-seo

SEO SUITE + AI VISIBILITY · SEO & WEB

Ahrefs (Site Explorer + Brand Radar AI)

Major SEO toolbox known for backlink and competitor data. Brand Radar shows how AI answers mention your brand.

WHAT IT MEANS FOR YOU

Excellent competitor and backlink research. The catch: its privacy policy (4 Aug 2026) lists training its machine-learning models as a purpose, with no opt-out described, and Brand Radar AI starts at $199/mo on top of a plan.

Try — for public competitor and backlink research only, if the team prefers it to Semrush | 30 min to start

From $29/mo

● Amber Policy lists ML training as a purpose. Public data only; never paste internal texts.

$199/mo	US	4 Aug 2026
Brand Radar AI add-on, from	data storage	privacy policy date

+ Try this before Friday

exercise · 30 min to start

> In the free Ahrefs Webmaster Tools or a trial, check italdizain.az's referring domains (other websites linking to it) and compare them with one Baku competitor.

+ Should we use it?

good for · not for · advice

GOOD FOR

- Backlink and competitor research
- Finding sites worth PR outreach

NOT FOR

- Internal drafts or briefs in its AI writer
- Tight budgets

Better option? Semrush, whose AI terms are clearer on no training.

Our advice: Choose Semrush or Ahrefs, not both. If chosen, ask Ahrefs in writing whether AI Content Helper inputs are used for training.

+ Privacy and data details

plan · sources

Data stored in the US. The policy says inputs to AI tools may pass to third-party AI providers, and lists training of its ML models as a purpose. Own SOC 2 / ISO 27001 status not confirmed. A DPA is published.

Plan and price: Starter $29/mo; Lite $129; Standard $249; Advanced $449; Enterprise $1,499 (yearly); Brand Radar AI from $199/mo.

WEBSITE BEHAVIOUR + AI · SEO & WEB

Microsoft Clarity with Copilot

Free Microsoft tool that records how visitors scroll and click on the website. Its Copilot summarises recordings and heatmaps in plain words.

WHAT IT MEANS FOR YOU

Shows why visitors leave brand or boutique pages, with no need to watch hours of recordings. The catch: it records real visitors, so set masking to strict and update the cookie notice.

Try — for a 2–4 week pilot on the public website with strict masking, installed by the web contractor

15 min to explore; 30 min contractor install | Free

Amber — Records real visitor behaviour (personal data): strict masking and a privacy-notice update.

30 days	$0	Strict
recording retention	price	masking setting to use from day one

+ Try this before Friday

exercise · 15 min to explore; 30 min contractor install

> Read Microsoft's Copilot overview and list 3 questions the team would ask, e.g. 'Where do mobile visitors stop on the watches page?'. Decide whether the pilot is worth it.

+ Should we use it?

good for · not for · advice

GOOD FOR

- Finding confusing pages
- Seeing what ad visitors do on the site

NOT FOR

- Pages with personal forms
- Use without a privacy-notice update

Our advice: Turn on strict masking from day one and keep it off pages with forms. AI summaries can be wrong, as Microsoft's own page says.

+ Privacy and data details

plan · sources

Data stored in Microsoft Azure, kept 30 days. Masked text is not uploaded. Microsoft says Clarity does not sell data. It records customer behaviour (personal data), so add it to the privacy notice; explicit consent required for EU/UK visitors. Company sign-in via Azure AD is not supported.

Plan and price: Free

- learn.microsoft.com/en-us/clarity/faq

Website: learn.microsoft.com/en-us/clarity/copilot/overview

E) ADS · 10 TOOLS

Advertising

Start with the AI already inside Meta Ads Manager and Google Ads: your ad data already sits there, so no new company is involved. Risk appears when someone pastes an ad report into a personal AI plan, connects an outside tool to the ad account, or shares conversion value and ROAS (which reveal turnover). Meta (open beta since 29 Apr 2026) and Google now have official connectors for Claude and ChatGPT: start read-only. Google's ad-writing AI is English-first and does not write Azerbaijani or Russian. Every AI-changed image of a watch or jewel is checked by a person.

BUILT-IN AD CREATIVE AI · ADS

Meta Advantage+ creative and Ads Creative Studio

Switches inside Meta Ads Manager that let AI make extra versions of your ad: new backgrounds, wider crops, rewritten text, music, and short videos made from photos.

WHAT IT MEANS FOR YOU

Costs nothing extra and adds no new company, because your ads already go to Meta. The catch: AI edits can warp watches, jewellery and logos, and some switches turn themselves back on when you copy an ad.

Try now | 20 min to start | Free (ad spend only)

● Green Data goes only to Meta, which already holds your ads. Public ad material only.

Free	6 Oct 2026	One by one

no extra cost beyond ad spend

video-from-photos opened to all advertisers

each AI switch must be checked before publishing

Try this before Friday

exercise · 20 min to start

> In Ads Manager, start a draft ad (do not publish) using one public product photo from italdizain.az. Open the Advantage+ creative section and preview every enhancement. Screenshot each one and mark it keep or switch off according to whether it changed the product, logo or text. Bring the list on Friday.

Should we use it?

good for · not for · advice

GOOD FOR

- Testing more versions of one boutique ad without a new shoot
- Turning 3–5 product photos into a short Reels video
- Rewording ad text in several styles

NOT FOR

- Hero images of watches and jewellery where one wrong detail hurts the brand
- Ads the brand owner must approve pixel by pixel

Our advice: Use it, with a team rule: one person checks every AI switch just before publishing. Copying, duplicating or changing the format of an ad can switch enhancements back on.

Privacy and data details

plan · sources

Data goes only to Meta, which already holds your ads. Meta's public pages found do not say whether your uploaded creative trains its AI (unknown). Retention follows Meta's normal advertising terms. Only ad material meant for the public goes in. Never put turnover, margins or customer names into ad text prompts.

Plan and price: Free inside Ads Manager; you pay only for the ads. Video from still photos became generally available on 6 Oct 2026.

Website: facebook.com/business/help/297506218282224

AD REPORTING ASSISTANT · ADS

Meta AI business assistant (in Ads Manager)

A chat helper inside Ads Manager and Meta Business Suite. You ask questions about your campaigns in plain words and it explains results and suggests fixes.

WHAT IT MEANS FOR YOU

Quick answers like 'why did cost per message rise this week?' without exporting anything, and the data never leaves Meta. The catch: still a beta, and actions that change campaigns are only in testing.

Try now | 10 min to start | Free

Green Questions and answers stay inside Meta; don't type customer names or turnover totals.

Free	Beta	Apr 2026
part of Ads Manager	answers live; changing campaigns still in test	opened worldwide

Try this before Friday

exercise · 10 min to start

> Each person asks the assistant the same three questions about one live campaign: 'Which ad had the lowest cost per result in the last 30 days and why?', 'What should I change first?' and 'Is anything under-delivering?' Check one answer against the numbers in Ads Manager.

Should we use it?

good for · not for · advice

GOOD FOR

- Weekly 'what changed and why' questions
- Spotting an ad that suddenly costs more
- Learning Ads Manager faster

NOT FOR

- Making changes without a person checking
- Reports that combine Meta with Google or the website

Our advice: A good, safe first step, because nothing leaves Meta. Treat its advice as a junior analyst's: check the numbers before acting. Meta's free automated rules in Ads Manager cover most 'pause if too expensive' needs without a third-party tool.

Privacy and data details

plan · sources

Questions and answers stay inside Meta, which already holds the ad data; no new company involved. Meta does not say publicly whether these chats train its AI (unknown). Do not type turnover totals, customer names or phone numbers.

Plan and price: Free inside Ads Manager. Beta opened to advertisers worldwide in April 2026. Agentic actions, scheduled tasks and memory still in test as of 6 Oct 2026.

BUILT-IN SEARCH AD AI · ADS

Google Ads AI: AI Max, Performance Max assets, Asset Studio and Ask Advisor

Google's AI inside Google Ads. It finds extra search phrases, rewrites ads to match each search, makes images and short videos from your website (Asset Studio, Gemini Omni video), and has a chat helper.

WHAT IT MEANS FOR YOU

Free and already part of Google Ads; Google reports about 7% more conversions with AI Max. The catch: English-first. Ask Advisor and Asset Studio video are English-only, and the AI that writes ads from your website does not work for Azerbaijani or Russian pages.

Try — for English-language campaigns and English landing pages | 30 min to start | Free (clicks only)

◆ In our library: test attempted, needs a live Ads account

● Green Data goes only to Google, which already runs your ads. Public website and ad text only.

+7%	7 languages	0
more conversions, Google's own figure	for AI asset writing: EN, NL, FR, DE, IT, PT, ES (no AZ or RU)	videos we could make in our test (needs a live Ads account)

+ Try this before Friday

exercise · 30 min to start

> Whoever holds the Google Ads login: open Asset Studio and generate 5 images and one draft video from an English product page on italdizain.az. Save as drafts only, and check product, logo and colours by eye. Then note whether one Search campaign is on the AI Max upgrade list.

+ Should we use it?

good for · not for · advice

GOOD FOR

- English campaigns aimed at tourists and expats
- Quick product images and videos for Performance Max
- Finding search phrases you missed

NOT FOR

- Azerbaijani or Russian ad text written by Google's AI
- Luxury brand visuals without human review

Our advice: Use it for English campaigns. For Azerbaijani and Russian ads, draft the text in Claude or ChatGPT and paste it in yourself. Review automatic upgrades: Google is moving old search settings into AI Max.

+ Privacy and data details

plan · sources

Data goes only to Google, which already runs your ads. Google's help page on AI-made assets does not say whether inputs train its models and gives no retention period (unknown). Outputs carry a SynthID watermark. Inputs are your public website and ad text, so risk is low. Never paste sales figures into prompt boxes.

Plan and price: Free inside Google Ads; you pay for clicks. AI Max left beta April 2026. Ask Advisor announced 20 May 2026 (English beta). Asset Studio video free for all advertisers (English only).

Library id: `0e6a8d313e` — In our library: test attempted, needs a live Ads account

OFFICIAL AD DATA CONNECTOR · ADS

Meta Ads AI Connectors (official link from Claude or ChatGPT to Meta ads)

Meta's own official link (an MCP) that lets Claude, ChatGPT or Perplexity read your Facebook and Instagram ad results and, if you allow it, prepare campaigns. Prepared campaigns arrive as drafts in Ads Manager.

WHAT IT MEANS FOR YOU

Weekly ad reports and 'what worked' summaries in minutes, with Meta's own login and no middleman company. The catch: the ad numbers, including sales value, travel to the AI, so you need a business AI plan, and it can also change live campaigns.

Try — for read-only weekly reporting, by one named person, from a business AI workspace

20 min with the ad account admin | Free (beta)

Amber Ad numbers (incl. sales value) go to the AI you connect: business plan and read-only only.

29 Apr 2026	29	Drafts

open beta launched

tools across reporting, campaigns, catalog, accounts

agent work lands as a draft in Ads Manager

Try this before Friday

exercise · 20 min with the ad account admin

> Without connecting anything: make a fake 20-row spreadsheet of campaigns (made-up spend, clicks and messages; no revenue column). Ask Claude or ChatGPT to turn it into a one-page weekly report in Russian with 3 actions. If the team likes it, that is what the connector would automate later.

Should we use it?

good for · not for · advice

GOOD FOR

- Weekly cross-campaign summaries in Russian or Azerbaijani
- Drafting a campaign that a person then reviews in Ads Manager

NOT FOR

- Anyone on a personal or free AI plan
- Letting an agent change budgets unsupervised
- Accounts holding customer upload lists until terms are clear

Our advice: The right way to link AI to Meta ads, far better than third-party connectors. Start read-only, with one person, on a business AI plan, and set the business-portfolio rules first.

Privacy and data details

plan · sources

Data travels from Meta to whichever AI you connect. On Claude Team or Enterprise it is not used for training and kept 30 days by default; on personal Claude Free, Pro or Max it may be used if Model Improvement is on. Sources disagree on permissions: some report read-only, read/write and read/write/financial levels; another says scopes are auto-granted and write actions have no undo. Limit consent to one business portfolio. A portfolio admin can set rules limiting what agents may do. Meta does not describe retention or training for connector data (unknown).

Plan and price: Free during open beta (since 29 Apr 2026, widened 16 Jul 2026). Needs an AI plan that allows custom connectors.

CROSS-CHANNEL REPORT CONNECTOR · ADS

Supermetrics (AI chats and MCP connector)

An established reporting service that pulls Meta, Google, TikTok and Analytics numbers together. You can then ask about them in ChatGPT, Claude or Microsoft Copilot.

WHAT IT MEANS FOR YOU

One place to ask 'how did all channels do last month?', and it works with Copilot, which suits a Microsoft 365 company. The catch: a third company now sees the numbers, and plans start at €49 a month.

Try — for monthly cross-channel reporting, after reading its security pack and signing its DPA

30 min to start | From €49/mo

● Amber — Third party in the data path; vendor states SOC 2 + ISO 27001 and no training. Get the DPA first.

€49/mo	SOC 2 + ISO 27001	14 days
entry plan	vendor-stated certificates	free trial, no card

+ Try this before Friday

exercise · 30 min to start

> Start the free trial and connect only Google's public demo Analytics account (the 'Google Merchandise Store' demo property), not Italdizain's accounts. Ask the AI chat for a channel summary and judge the format.

+ Should we use it?

good for · not for · advice

GOOD FOR

- One monthly report across Meta, Google and TikTok
- Asking Copilot or Claude questions about all channels at once

NOT FOR

- A team that only runs Meta ads (use Meta's own tools)
- Sharing revenue with an outside party before the DPA is signed

Our advice: The most mature of the outside reporting tools. Ask for its SOC 2 report and DPA before connecting real accounts.

+ Privacy and data details

plan · sources

Data flows from the ad platforms through Supermetrics to your chosen AI. Supermetrics says it is SOC 2 Type II and ISO 27001 certified, does not store raw ad data (queries platforms on demand), and does not use customer data to train public models. Regional hosting 'available' but locations not stated. Vendor claims: ask for the reports. The AI side must be a business plan.

Plan and price: Starter €49/month (€39 yearly; 2 sources, 1 user), Growth €199/month (€159 yearly; 7 sources, 2 users), Enterprise custom. Starter and Growth include one AI chat destination. Full MCP/API appears to be Enterprise.

14-day free trial.

Website: supermetrics.com/products/supermetrics-mcp

BUILT-IN VIDEO AD AI · ADS

TikTok Symphony (Creative Studio, Assistant, Smart+)

TikTok's own AI for advertisers. It turns product photos or a link into short TikTok videos, adds stock AI presenters, translates voice-overs and writes scripts.

WHAT IT MEANS FOR YOU

Fast TikTok-style video drafts from existing product photos, reported as free. The catch: whether your uploads train TikTok's AI is unclear, and Russian or Azerbaijani voice support is unconfirmed.

Try — for TikTok video drafts from public product photos only, if the team runs TikTok ads · 20 min to start

Reported free

● Amber TikTok's general terms allow ML training on content. Public product material only.

Free	30+	Unclear
reported; not confirmed by TikTok	languages for stock AI presenters (Russian not confirmed)	whether advertiser uploads train TikTok's AI

+ Try this before Friday

exercise · 20 min to start

> Take 4 public product photos of one vase or tableware set from italdizain.az. In Symphony Creative Studio, make one 15-second draft video. Check whether a Russian or Azerbaijani voice-over is offered. Do not publish.

+ Should we use it?

good for · not for · advice

GOOD FOR

- Quick vertical videos for décor, tableware and textiles
- Testing hooks before paying for a shoot

NOT FOR

- Fine jewellery or watch close-ups that must be exact
- Anything with customers' faces

Our advice: Worth a test if TikTok is a real channel. Keep it to public product material, and check first that self-serve TikTok ads work for an Azerbaijan account.

Privacy and data details

plan · sources

Uploads go to TikTok (ByteDance). TikTok's general terms let it use content to train its machine-learning models. Symphony-specific advertiser terms on training were not found (unknown). Never upload customer photos, client lists or internal price lists.

Plan and price: Reported free for advertisers (not confirmed on a TikTok pricing page). Seedance 2.0 video model added in 2026. Custom avatars only for select advertisers.

AI AD VARIANT MAKER · ADS

Pencil (AI ad generator by Brandtech)

An online tool that makes many ad image, text and video versions from your product and brand material, and predicts which may work best.

WHAT IT MEANS FOR YOU

A cheap way to test whether AI ad variants look good enough for Italdizain brands. The catch: the written 'no training on your data' promise is only on the expensive Pro plan.

Try — for testing ad variants from public product photos on the Core plan | ⏱ 30 min to start | From $14/mo

● Amber 'No train' terms only on Pro; on Core/Growth use public product photos only.

$14/mo	50	Pro only
entry plan	generations a month on Core	written 'no train' terms

Try this before Friday

exercise · 30 min to start

> Take one public product photo and the brand's public logo. Generate 5 Instagram ad variants on the cheapest plan or trial. Score each 1–5 for 'would the brand owner approve this?' and bring the scores.

Should we use it?

good for · not for · advice

GOOD FOR

- Making 10 versions of one banner to test
- Seeing what AI-made ads look like for a luxury brand

NOT FOR

- Unreleased collections or price lists on Core
- Creator-style talking-head videos

Better option? AdCreative.ai is the main rival, but no security page or privacy policy could be found on its homepage (13 Oct), so Pencil comes first.

Our advice: Good for a cheap quality test. If the team adopts it for real campaigns, move to Pro with the no-train terms in the contract.

Privacy and data details

plan · sources

Uploads go to Pencil, which uses several AI models. 'No train' terms, data ring-fencing and role-based access are listed for Pro only; Core and Growth training position not stated (unknown). Pencil publishes a DPA, a sub-processor list and an AI Trust Centre. No SOC 2 or ISO named on the pricing page.

Plan and price: Core $14/month ($11 yearly, 50 generations), Growth $55/month ($44 yearly, 250 generations), Pro custom (unlimited, enterprise terms). Unused generations do not roll over.

AD ACCOUNT CHECKER · ADS

Claude Ads (free ad-audit add-on)

A free Claude Code add-on that reads exported reports from Meta, Google, TikTok and other ad platforms and writes a scored audit. It only reads and changes nothing.

WHAT IT MEANS FOR YOU

A second opinion on wasted spend from an export file, with no outside company connected to the account. The catch: someone technical must install it (needs Python 3.11+), and the export still goes to Claude.

Worth a look later · 20 min to set up (needs IT) · Free · ◆ Partially tested by us 12 Oct 2026

Runs locally; the export goes to Claude. Delete revenue columns and customer data first.

● Amber

~30	Read-only	Not run
ad topics covered (platforms, budgets, reports)	by default; changes need approval	our partial test 12 Oct: the Mac's Python was too old

+ Try this before Friday

exercise · 20 min to set up (needs IT)

> Not a team task. Huseyn or IT can run it once on a made-up export (fake spend and clicks, no revenue, campaign names replaced by codes) and show the audit on Friday.

+ Should we use it?

good for · not for · advice

GOOD FOR

- Checking a Meta or Google export for wasted spend
- Ads the team runs itself

NOT FOR

- Ads run by an agency that gives no exports
- Connecting live ad accounts

Our advice: Our test (12 Oct): downloaded and read, careful design (it builds a data report first and never claims a platform it has no data for), but no audit run yet. Try it after Python 3.11+ is installed, read-only, with money columns removed.

+ Privacy and data details

plan · sources

The tool runs on your own computer. The export is read by Claude, so it follows your Claude plan's rules: Team or Enterprise, no training and 30-day retention; personal plans, possible training if Model Improvement is on. Ad spend and results are commercially sensitive: remove conversion-value/revenue columns and anything naming customers.

Plan and price: Free (MIT); needs a Claude plan and Python 3.11 or 3.12.

OFFICIAL AD DATA CONNECTOR · ADS

Google Ads MCP server (official, read-only)

Google's own free link that lets Claude or another AI read Google Ads campaign numbers. It cannot change bids, pause campaigns or create ads.

WHAT IT MEANS FOR YOU

A safe, read-only way for Claude to answer Google Ads questions. The catch: not click-to-connect. Someone must set up a Google Cloud project and run it.

Worth a look later | 1–2 hours (IT) | Free

Amber Read-only and self-run; results go to the AI you connect, so a business plan only.

Read-only	Free	30 Sep 2026
cannot change anything	open source by Google	page last updated

Try this before Friday

exercise · 1–2 hours (IT)

> Read Google's page (10 min) and list what IT would need: a Cloud project, API access and an OAuth login. Decide on Friday whether it is worth Huseyn's server time.

Should we use it?

good for · not for · advice

GOOD FOR

- Letting Claude answer Google Ads questions on the automation server
- Weekly Google Ads summaries

NOT FOR

- Marketers setting it up alone
- Making changes to campaigns

Better option? Google's built-in Ask Advisor if the team works in English; or simply export a report and give it to the AI.

Our advice: The official and safest Google route, a good fit for Huseyn's automation server later. Confirm first who owns the Google Ads account.

Privacy and data details

plan · sources

You run it yourself (on a computer or your own Google Cloud). Google's repo says it exposes your data to the AI you connect, so the AI must be a business plan. It adds a header to API calls that Google uses to improve the product. Read-only, so it cannot damage campaigns.

Plan and price: Free (Apache-2.0). Needs a Google Cloud project with Google Ads API access and OAuth. Developer tokens retired 9 Sep 2026. Page updated 30 Sep 2026.

Sources

- github.com/googleads/google-ads-mcp

Website: developers.google.com/google-ads/api/docs/developer-toolkit/mcp-server

AD DATA CONNECTOR · ADS

Ryze Ads MCP (third-party Google + Meta connector)

A paid online service from a small startup that lets Claude or ChatGPT read Google Ads, Meta Ads and Google Analytics after you sign in.

WHAT IT MEANS FOR YOU

One connector for both Google and Meta. The catch: a young outside company sits between your ad accounts and the AI, and its own description contradicts itself on what it stores.

Skip · 15 min · ~$89/mo · ◆ Checked by us (repo review)

● Red Contradictory claims about storing your data and tokens; no certificates.

$89/mo	2 people	Contradictory
after the 7-day trial	contribute, despite 4,500 stars	claims about storing your data

+ Try this before Friday

exercise · 15 min

> Do not connect. If asked about it on Friday, point to the official Meta and Google connectors instead.

+ Should we use it?

good for · not for · advice

GOOD FOR

- Nothing the official connectors cannot do

NOT FOR

- Any real Italdizain ad account

Better option? Meta Ads AI Connectors and Google's official Google Ads MCP server.

Our advice: Skip. Use the official Meta and Google connectors. The same applies to Madgicx (privacy policy from Jan 2023, no certificates, hidden prices).

+ Privacy and data details

plan · sources

Ad data passes through Ryze's hosted service. Our library check found the README contradicts itself on data and token storage ('stores nothing' versus tokens on your machine) and on read-only versus read-and-write. No certificates found.

Plan and price: About $89/month after a 7-day trial.

F) SOCIAL & CLIENTS · 10 TOOLS

Social media and clients

Big social suites now send your text to OpenAI, Anthropic, Microsoft or Google under contracts that forbid training, but Sprout's and Hootsuite's terms let the vendor itself use your AI inputs to improve its own AI. Meta's free Business Agent for WhatsApp and Instagram is visible to Meta and may be used to improve Meta's AI, so it only ever learns public information. Buffer, Metricool and respond.io publish no clear AI-training statement: ask them three questions in writing (which AI provider, do you or they train on our content, where is it stored). A social tool may see what is already public and post drafts, never turnover, client lists or VIP notes. Azerbaijani support is unverified for every tool here.

ALL-IN-ONE SOCIAL SUITE · SOCIAL & CLIENTS

Sprout Social (Trellis AI and AI Assist)

One place to plan and publish posts, answer comments and DMs from every network, and see reports. Built-in AI drafts posts and replies and summarises what people say.

WHAT IT MEANS FOR YOU

The safest big suite on paper, with the strongest certificates. Good for several people across many brand accounts. The catch: expensive per seat, and Sprout may use AI inputs to improve its own AI.

Try now | 30 min to start a trial | From $79/seat/mo

Amber — OpenAI may not train on it, but Sprout itself may; OpenAI features can be switched off.

SOC 2 + ISO 27001/27701	OpenAI	$79
certificates	AI provider (can be switched off)	per seat per month, billed yearly

+ Try this before Friday — exercise · 30 min to start a trial

> Start the free trial and connect one test Instagram account (not the main brand). Write three made-up posts about a fictional tableware launch and use 'Enhance by AI Assist' to rewrite each in a luxury tone. Then open Settings > AI Settings and check the switch to turn OpenAI features off is there.

Should we use it?

good for · not for · advice

GOOD FOR

- Shared inbox for Instagram, Facebook and TikTok comments and DMs
- Approval workflows before posting
- Reports for management

NOT FOR

- Anything containing sales figures or client identities
- Small budgets: the cost is per seat

Better option? Metricool if the budget is small. Hootsuite is a close rival (SOC 2 Type II, ISO 27001/27017/27701, from $99/user) with the same 'vendor may use your AI inputs' clause.

Our advice: Shortlist it. Before buying, ask for the DPA, the AI policy, an opt-out from Sprout's own training, and EU data hosting (none is stated).

Privacy and data details

plan · sources

Data processed in the USA (AWS, Google Cloud backups). Generative AI runs on OpenAI. Sprout's AI terms (7 Jul 2026) say providers may not train on your content, but Sprout itself 'may use the AI Content to train, develop, and improve the AI Features'. OpenAI features are on by default; the account owner can switch them off in AI Settings. SOC 2 Type II, ISO 27001:2022 and ISO 27701, GDPR, DPA available. Retention of AI inputs not stated. Hootsuite's AI terms (29 Jul 2025) are similar: third-party providers may not train, Hootsuite may use content to improve its own AI.

Plan and price: Per seat per month: Essentials $79 yearly or $99 monthly; Standard $199, Professional $299, Advanced $399 (annual billing shown). Enterprise custom. AI reply drafting from Advanced. Listening is an add-on from Standard. Checked 13 Oct 2026.

DM AUTO-REPLIES · SOCIAL & CLIENTS

Meta Business Agent (WhatsApp Business, Instagram, Messenger)

Meta's own free AI that answers customers in WhatsApp and Instagram DMs. It learns from your past chats, website, catalogue and documents, and hands over to a person when needed.

WHAT IT MEANS FOR YOU

It works where Baku clients already write, at no cost. The catch: Meta can see these chats and may use them to improve its AI, so it should only ever be taught public information.

Try — for test mode on a spare WhatsApp Business number, taught only with the public website and catalogue

20 min in test mode | Free for now

● Red Meta sees the chats and may use them to improve its AI; setup can learn from old client chats.

3 Jun 2026	Yes	Unknown
launched globally	Meta sees chats, per Meta's own page	Azerbaijani quality

+ Try this before Friday

exercise · 20 min in test mode

> On a spare phone with a test WhatsApp Business number, open Tools > Meta Business Agent. Add only italdizain.az and a made-up five-product catalogue. Stay in test mode and ask it ten typical client questions in Azerbaijani, Russian and English (opening hours, gift wrapping, 'do you have Bernardaud?'). Count correct, on-brand answers.

+ Should we use it?

good for · not for · advice

GOOD FOR

- Answering routine questions after hours
- Learning what clients ask most often

NOT FOR

- VIP or private-client conversations
- Anything about prices, discounts or orders tied to a named client

Better option? respond.io or BSPK for a controlled business inbox with contracts.

Our advice: The team should see it, because competitors will use it. Keep it in test mode until Huseyn decides. Check whether Azerbaijani works well; no source confirms it.

+ Privacy and data details

plan · sources

Meta's transparency page (30 Jul 2025) says these chats 'will be visible to you, the business and Meta' and 'Your feedback and messages may be used to improve AI at Meta'. Setup can learn from your past chats, so turning it on can expose old client conversations to the AI. Retention and data location not stated. Never upload price lists with margins, client lists, stock or turnover files.

Plan and price: Free to start, including on Instagram. Meta says paid tiers are coming in WhatsApp Business Premium; large businesses will pay per use. Prices not published as of 13 Oct 2026.

SCHEDULING AND ANALYTICS · SOCIAL & CLIENTS

Metricool

A Spanish tool that plans and publishes posts, shows analytics, compares you with up to 100 competitor accounts, and includes an AI assistant and automatic comment and DM replies.

WHAT IT MEANS FOR YOU

Cheap and priced per brand rather than per person, which suits many Italdizain brands. The free plan lets the team try it today. The catch: which AI it uses, and whether it trains on your content, is not published.

Try now | 15 min to start | Free; from €16/mo

Amber — EU company with a DPA, but AI provider and training not published. Public content only.

Yes, 1 brand	Up to 100	Madrid
free plan	competitor accounts tracked (paid)	company base (EU)

+ Try this before Friday

exercise · 15 min to start

> Create a free account and connect one test Instagram account. Add five public competitor accounts (e.g. other Baku luxury boutiques) and look at the competitor report. Use the AI assistant to write three captions for a made-up watch event in Russian and English.

+ Should we use it?

good for · not for · advice

GOOD FOR

NOT FOR

- Many brand accounts on a small budget
- Competitor benchmarking
- Quick start without IT

- Large teams needing strict approval chains
- Any internal figures in AI prompts

Better option? Sprout Social if certificates and approval workflows matter more than price.

Our advice: Email legal@metricool.com before Friday asking which AI provider it uses, whether inputs are used for training, and where data is stored. Get the DPA if the team likes it.

+ Privacy and data details

plan · sources

Metricool Software S.L. (Madrid) acts as a GDPR processor and signs a DPA on request at legal@metricool.com. The DPA does not name AI providers or say where data is stored. No public statement on AI training, AI retention or security certificates.

Plan and price: Free: 1 brand, 5 AI credits/month. Starter from €16/month yearly (€20 monthly) for 5 brands. Advanced from €43/month yearly for 15 brands, up to €130 for 50 brands. Checked 13 Oct 2026.

SIMPLE SCHEDULING · SOCIAL & CLIENTS

Buffer (AI Assistant)

A simple, cheap tool to schedule posts, with an AI Assistant that rewrites and repurposes posts and suggests replies to comments.

WHAT IT MEANS FOR YOU

The easiest way for each marketer to try AI post writing today, for free. The catch: data sits in the USA with OpenAI and Anthropic as AI suppliers, and Buffer does not say whether it trains on content.

Try now | 15 min | Free; $5/channel/mo

● Amber US hosting, content kept indefinitely, no training statement. Post drafts only.

3 channels	OpenAI, Anthropic	Indefinite
free plan	AI suppliers (USA)	content retention while account is active

Try this before Friday

exercise · 15 min

> Open a free account (3 channels) with a test Instagram account. Paste a made-up product description of a silk table runner. Ask the AI Assistant for three Instagram versions and one shorter TikTok caption, then compare with what the team would write.

Should we use it?

good for · not for · advice

GOOD FOR

- Learning AI caption writing at no cost
- Small brand accounts

NOT FOR

- Shared inbox for many staff
- Anything confidential

Better option? Metricool, which also has a free plan and is EU-based.

Our advice: Good as a personal sandbox for learning AI post writing. For company-wide use, prefer a tool with published certificates.

Privacy and data details

plan · sources

Buffer's sub-processor list names OpenAI and Anthropic for AI, plus AWS and MongoDB Atlas for hosting, all in the USA. User content is stored 'indefinitely' while the account is active and deleted with the account. No statement found on AI training or SOC 2.

Plan and price: Free: up to 3 channels, AI Assistant included, 5 AI reply suggestions per week. Essentials $5 per channel per month. Team $10 per channel per month, unlimited users. Checked 13 Oct 2026.

Sources

- buffer.com/pricing
- buffer.com/security

Website: buffer.com/pricing

SOCIAL LISTENING · SOCIAL & CLIENTS

YouScan (Insights Copilot, Visual Insights)

Tracks public posts and comments that mention your brands or competitors, recognises logos in photos, and lets you ask questions about the results in plain language.

WHAT IT MEANS FOR YOU

Shows what Baku shoppers say about Italdizain's brands and competitors, including in photos. The catch: Azerbaijani coverage is unconfirmed, and it is unclear whether its AI assistant uses ChatGPT.

Try — for a paid pilot on 3 public topics, after confirming Azerbaijani and Russian coverage | 30 min demo

From $299/mo

Amber Works on public social data; AI provider unclear. Upload no internal files.

$299/mo	Netherlands	Unconfirmed
entry price (vendor blog, Jan 2026)	Microsoft hosting (self-reported)	Azerbaijani coverage

Try this before Friday

exercise · 30 min demo

> Book a demo and ask them to show a live search on 'Italdizain' and two competitor names in Azerbaijani and Russian, plus logo recognition on a luxury brand. Note how many real local posts appear.

Should we use it?

good for · not for · advice

GOOD FOR

- Brand reputation tracking
- Competitor monitoring
- Spotting logos in user photos

NOT FOR

- Publishing or replying
- Internal data

Better option? Brandwatch for an enterprise option with clearer AI rules.

Our advice: Ask in writing about Azerbaijani coverage, the Copilot's AI provider and the DPA.

Privacy and data details

plan · sources

Works on public social data, so risk is low if no internal files are uploaded. A self-reported Slack listing says data is hosted by Microsoft in a Netherlands data centre and kept for the life of the account. GDPR badge and DPA link on the site. Whether Insights Copilot sends data to OpenAI is unclear (reviews say 'powered by ChatGPT'; the Slack listing says no LLM). No SOC 2 or ISO found.

Plan and price: Starter 3: $299 per month for 3 topics and 30,000 mentions, with Insights Copilot (vendor blog, 27 Jan 2026; third-party sites still show $499). Visual Insights add-on. Larger plans custom.

SOCIAL LISTENING · SOCIAL & CLIENTS

Brandwatch (Consumer Research, Iris AI)

An enterprise social listening and management platform. Its AI ('Iris') summarises conversations, writes searches and drafts posts.

WHAT IT MEANS FOR YOU

Has the clearest written AI rules in this group, but is priced for large companies with no public price. Its 7-question AI FAQ is the best checklist for questioning every other vendor.

Worth a look later | 5 min reading, then a demo if needed | On request

● Amber — Third-party AI may not train and keeps data ≤30 days; own-model training not stated.

Not allowed	≤30 days	ISO 27001:2022
third-party AI training on your data	AI vendor retention	all products

Try this before Friday

exercise · 5 min reading, then a demo if needed

> Read the 7-question AI FAQ (5 min) and use it as the checklist for every other vendor: which AI providers, do they train, how long is data kept, can we opt out, how do we delete.

Should we use it?

good for · not for · advice

GOOD FOR

- Deep listening
- A model checklist for AI privacy questions

NOT FOR

- A small team's first tool

Better option? YouScan for a cheaper pilot.

Our advice: Use its AI FAQ as the standard to measure the others against (Smartly's security page is a similar yardstick for ad tools: ISO 27001, EU storage, DPA, access logs, deletion at contract end). Ask for a quote only if YouScan's local coverage disappoints.

Privacy and data details

plan · sources

Brandwatch's AI FAQ: third-party vendors (OpenAI, Gemini, Speechify) are optional, may not train on customer data, and keep data up to 30 days; an admin can switch them off. In-house AI uses its own models; whether Brandwatch trains them on customer data is not stated. ISO 27001:2022. Social Media Management hosted on AWS and GCP in the EU; Listening in the US and UK, public data only.

Plan and price: Not published; custom quote after a demo (checked 13 Oct 2026).

- brandwatch.com/legal/information-security/
- smartly.io/security

Website: brandwatch.com/legal/artificial-intelligence-faqs/

CLIENT FOLLOW-UP (CLIENTELING) · SOCIAL & CLIENTS

BSPK (luxury clienteling with AI agents)

A clienteling app for boutique advisors. It joins store, web and stock data into one client profile, and AI drafts personal WhatsApp, SMS and e-mail messages that the advisor approves before sending.

WHAT IT MEANS FOR YOU

Built for brands like Hermès and Christofle, so it fits Italdizain's 26 boutiques. The catch: it would hold real client data, there is no public price, and its privacy policy is unfinished.

Try — for a vendor demo on BSPK's own demo data; no Italdizain client data before a DPA and security review

30 min to book and prepare a demo | Not published | ◆ Tested by us 12 Oct 2026 (product review)

● Amber Would hold real client data: only after a signed DPA and security review. Demo data only now.

Every message	Not published	USA / EEA?
approved by a person (our test)	price	data location (unconfirmed)

+ Try this before Friday

exercise · 30 min to book and prepare a demo

> Watch the product pages and book a demo. Prepare five questions: price for about 26 boutiques, whether WhatsApp uses the official Business API, whether it connects to 1C, where data is stored, and whether our data trains their AI.

+ Should we use it?

good for · not for · advice

GOOD FOR

- VIP client follow-up by boutique advisors
- Personal outreach on WhatsApp with approval

NOT FOR

- Mass marketing
- A trial with real client data before a contract

Better option? Tulip clienteling AI (library c77953d765) is the main alternative to compare; also Salesfloor.

Our advice: Shortlist BSPK with Tulip and Salesfloor; ask each for a 26-boutique quote, a reference customer in the region and a WhatsApp demo. Do not accept the 'two-week go-live' claim without proof.

+ Privacy and data details

plan · sources

The one category where real client data would go in, so it needs a contract. Privacy policy (June 2026): BSPK acts as GDPR processor; data 'generally stored in the United States', possibly in the EEA for EEA customers. The published page still contains an internal editor's note asking engineering to confirm where production data lives. AI providers not named, AI training not addressed. No SOC 2 or ISO found.

Plan and price: Not published. AI included in every plan from Boutique to Enterprise (vendor press release, 1 Sep 2026). Demo only.

MESSAGING INBOX AND AI AGENTS · SOCIAL & CLIENTS

respond.io

A shared inbox for WhatsApp, Instagram, Messenger and other chats, with AI that drafts replies and, on higher plans, AI agents that answer and route conversations.

WHAT IT MEANS FOR YOU

A controlled business inbox if DMs grow beyond what one phone can handle, with roles, rules and history. The catch: AI agents start at $159 a month, and Meta's WhatsApp fees come on top.

Try — for only if the team handles many WhatsApp and Instagram DMs across several staff · 30 min

From $79/mo

● Amber ISO 27001, but AI provider and training not published. Ask for DPA before real client chats.

ISO 27001	$159/mo	Not published
certificate	AI agents from	AI provider

Try this before Friday

exercise · 30 min

> Start a trial on a test number. Load a made-up FAQ (opening hours, delivery, gift cards) and see whether AI Assist drafts sensible replies in Russian and Azerbaijani.

Should we use it?

good for · not for · advice

GOOD FOR

- Several staff sharing one WhatsApp/Instagram inbox
- Routing VIP chats to the right advisor

NOT FOR

- Low message volume

Better option? Chatwoot if IT wants the inbox on Italdizain's own server.

Our advice: Compare it with Meta's free Business Agent: respond.io gives more control, roles and audit history, which matters for a luxury brand.

Privacy and data details

plan · sources

States ISO 27001 and GDPR compliance; runs on AWS with AES-256 at rest and TLS in transit; users can delete their data. Security page names no AI providers and does not say whether chats train AI. Data region not stated.

Plan and price: Starter $79/month yearly ($99 monthly), 5 users, AI Assist, no agents. Growth $159 ($199), 10 users, AI agents. Advanced $279 ($349). Enterprise custom. Meta's WhatsApp fees extra. Checked 13 Oct 2026.

Sources

- respond.io/pricing
- respond.io/security

Website: respond.io/pricing

INFLUENCER DISCOVERY · SOCIAL & CLIENTS

Modash (influencer discovery)

Searches a large database of Instagram, TikTok and YouTube creators by niche, audience location and fake-follower score, using plain-language AI search.

WHAT IT MEANS FOR YOU

Helps find real Baku and regional influencers for jewellery, watches and home décor, and spot fake followers. The catch: coverage of Azerbaijani creators is unverified.

Try — for the 14-day free trial, to check how many genuine Azerbaijan-based creators it finds 20 min

From $199/mo

Green Works on public creator data; only your search terms and shortlist are yours.

14 days	ISO 27001 + GDPR	Unverified
free trial, no card	badges on pricing page	Azerbaijan coverage

Try this before Friday

exercise · 20 min

> Start the free trial. Search 'luxury lifestyle, audience in Azerbaijan, 10k–200k followers' and 'interior design Baku'. Record how many results are real local creators and how many have a high fake-follower score.

Should we use it?

good for · not for · advice

GOOD FOR

- Finding and vetting influencers
- Spotting fake followers

NOT FOR

- Running payments in Azerbaijan (not checked)

Better option? HypeAuditor is similar (~$299–499/month per third-party sources; Azerbaijan coverage unknown).

Our advice: Useful only if the creator database really covers Azerbaijan. The trial answers that in 20 minutes.

Privacy and data details

plan · sources

Public creator data. The pricing page shows ISO 27001 and GDPR badges, links a DPA, and says accounts are deleted 90 days after cancellation. A third-party source says the company is Estonian (EU). ISO scope not checked.

Plan and price: Essentials $199/month ($2,388 yearly). Performance $499/month. Enterprise from $14,700/year. 14-day free trial, no card. Checked 13 Oct 2026.

Sources

- modash.io/pricing

Website: modash.io/pricing

SELF-HOSTED CHAT INBOX · SOCIAL & CLIENTS

Chatwoot (open-source shared inbox)

A free, open-source shared inbox for WhatsApp, Instagram, website chat and e-mail. It can run on Italdizain's own server, so the chats never leave it.

WHAT IT MEANS FOR YOU

The privacy-first option: client chats stay on a company server. The catch: IT has to install and run it, and the AI helper ('Captain') needs a paid edition.

Try — for only if management wants all client chats kept on Italdizain's own server (needs IT)

Half a day for IT; 10 min to view the demo | Free self-hosted | ◆ Tested by us (not installed: server disk full)

● Green Self-hosted: data stays on your server, no AI. Cloud edition is US-hosted.

37,735	Free	~4 GB
GitHub stars, MIT core (our test)	self-hosted, data stays in-house	server space it needs

+ Try this before Friday

exercise · Half a day for IT; 10 min to view the demo

> Watch Chatwoot's public demo and list which of today's WhatsApp and Instagram chats the team would move into a shared inbox. No install needed for the meeting.

+ Should we use it?

good for · not for · advice

GOOD FOR

- Keeping client chats in-house
- One inbox for several channels

NOT FOR

- A team with no IT support

Better option? respond.io if no one can run a server.

Our advice: Our test: very active and MIT licensed, but needs a database, a queue and about 4 GB of server space. Plan a proper server before trying it.

+ Privacy and data details

plan · sources

Self-hosted Community Edition: data stays on your server and there is no AI, the safest option for real client chats. Chatwoot Cloud runs on AWS in the USA and keeps data 1–3 years depending on plan. Captain AI reportedly uses OpenAI (third-party source); AI training and retention terms not published.

Plan and price: Self-hosted Community Edition free, no AI. Cloud per agent per month: Hacker $0, Startups $19 (300 AI credits), Business $39, Enterprise $99. Extra AI credits $20 per 1,000.

G) AUTOMATION · 5 TOOLS

Automation and connecting it all

Automations decide where data flows without anyone watching, so pick the setup before building. n8n on our own server keeps data in-house; Zapier or Make are quicker but run in their cloud; Power Automate stays inside the Microsoft contract. AI steps should use business APIs (not trained on by default; zero retention by agreement). Every automation that publishes anything has a human approval step.

WORKFLOW AUTOMATION · AUTOMATION

n8n self-hosted automation (with n8n-MCP so Claude builds the workflows)

A drag-and-drop automation builder with AI steps, run on our own server, so data from Instagram, forms or the website goes only where you decide. The n8n-MCP add-on gives Claude n8n's full manual so it can draft working workflows for you.

WHAT IT MEANS FOR YOU

The strongest answer to 'where does our data go?' for automations: new product, then draft post, then manager approval, then scheduled post. The catch: someone technical must set it up and look after it.

Try — for one pilot automation, built with IT, on our own server · ⏱ 2–3 hours with IT for the first workflow

Free self-hosted · ◆ In our library (not hands-on tested)

● Green Self-hosted: workflows and logs stay on your server; data leaves only through the AI step you add.

€0	2,951	Frankfurt
self-hosted community edition	n8n building blocks n8n-MCP knows	where n8n Cloud stores data

+ **Try this before Friday** — exercise · 2–3 hours with IT for the first workflow

> On paper: map one weekly routine (e.g. new arrivals, then caption drafts, then manager approval, then scheduled post) as boxes and arrows, written as 'when X happens, AI does Y, a person

> approves Z'. Mark which step would touch confidential data. Optionally browse n8n's template gallery for 2 similar workflows.

+ Should we use it?

good for · not for · advice

GOOD FOR

- New Instagram DM or website form, then an AI-drafted reply sent to a person for approval
- Weekly ad and website numbers collected into one email
- Monitoring public competitor pages

NOT FOR

- Marketers building alone with no IT support
- Posting to social media without human approval
- Editing live production workflows with AI

Better option? Zapier or Make if speed matters more than keeping data on our own server.

Our advice: Huseyn already runs an automation server (hz-automation-1); a pilot could sit there, with approval steps before anything is published. n8n-MCP is untested by us: test only on copies.

+ Privacy and data details

plan · sources

Self-hosted: workflows and logs stay on your server. Data leaves only through the AI step you add, under that provider's API terms (Anthropic and OpenAI APIs don't train on API data by default; a local model sends nothing out). n8n Cloud stores data in Frankfurt. The Sustainable Use License allows internal business use. A third-party directory lists SOC 2 Type II and ISO 27001 for n8n (unverified, may cover only the cloud). The hosted n8n-mcp option routes requests through n8n-mcp.com (terms unknown).

Plan and price: Community edition free (self-hosted). Cloud Starter €20/mo (2.5K runs), Pro €50/mo (10K runs), Business €667/mo self-hosted, Enterprise on request. n8n-MCP free (MIT); its hosted option is 100 tool calls/day.

Library id: `cdd67d7610` — In our library (not hands-on tested)

CLOUD AUTOMATION · AUTOMATION

Zapier (Agents, AI steps, MCP) or Make

Ready-made cloud links between 7,000+ apps, with AI steps and agents. For example: a new website lead, then an AI summary, then a Teams message. No server needed.

WHAT IT MEANS FOR YOU

Marketers can build simple automations themselves in an afternoon. The catch: data passes through Zapier's US cloud, and only Enterprise customers are opted out of AI training automatically.

Try — for automations that touch only public or non-sensitive data | 30 min to start | Free; Team $69/mo

Amber — Data passes through a US cloud; non-Enterprise must opt out of training. No customer data.

$69/mo	7 days	eu1/eu2
Zapier Team, 25 seats, annual	shortest Zap history on Enterprise	Make's EU hosting zones

Try this before Friday

exercise · 30 min to start

> On Zapier's free plan, build a 2-step Zap: new item in a public RSS feed (e.g. a design magazine) leads to an AI step that drafts an Instagram caption and sends it to your email.

Should we use it?

good for · not for · advice

GOOD FOR

- New blog post, then AI-made social snippets as drafts
- Collecting public review mentions into a sheet

NOT FOR

- Customer lists, VIP client data or sales figures
- Automatic posting without approval

Better option? n8n self-hosted for anything with customer data. Power Automate for flows inside Microsoft 365.

Our advice: If you use Make, check the dashboard URL says eu1 or eu2 before building anything; moving later means rebuilding.

Privacy and data details

plan · sources

Zapier says Enterprise customers are automatically opted out of model training; others can opt out. Its AI subprocessors may not train on customer content, and it uses OpenAI's zero data retention. Enterprise can shorten Zap history to 7 days. Data residency not stated (treat as US). Make (Celonis): EU zones eu1/eu2, SOC 2 Type II and ISO 27001 stated, but the contract is with a US company and where its AI steps run is unclear.

Plan and price: Zapier: Free 100 tasks; Pro from $19.99/mo annual; Team from $69/mo annual (25 seats, SSO); Enterprise custom (page updated 12 Oct 2026). Make: Free 1,000 credits; paid tiers around $9–12/mo (sources

conflict).

MICROSOFT AUTOMATION · AUTOMATION

Power Automate and Copilot Studio (Microsoft)

Microsoft's automation and agent builder. It connects Outlook, Teams, SharePoint and other apps, and Copilot Studio adds AI agents that can answer or act.

WHAT IT MEANS FOR YOU

Automations that stay inside the Microsoft contract, for example sorting brief requests into a Teams channel. The catch: confusing licences and credit costs, and weak social-media connectors.

Worth a look later | 1 hour | From $15/user/mo

● Green Runs in your Microsoft tenant under the Microsoft DPA; third-party agents follow their own terms.

$15	$150	Tenant
Premium per user/month	unattended bot per month	data region follows your Microsoft 365

+ Try this before Friday

exercise · 1 hour

> Look at the templates in Power Automate (free with many M365 plans) and list 2 approval flows the team runs by email today.

+ Should we use it?

good for · not for · advice

GOOD FOR

- Routing requests and approvals in Teams
- A simple Copilot agent that answers 'what are our brand rules?'

NOT FOR

- Social media posting (weak connectors compared with Zapier/n8n)

Better option? n8n or Zapier for social and ads apps.

Our advice: Ask IT which Power Automate features your current M365 licences already include before buying anything.

Privacy and data details

plan · sources

Runs in your Microsoft tenant under the Microsoft DPA. Copilot agents fall under enterprise data protection, but third-party agents follow their own terms (Microsoft Learn). Region follows your tenant.

Plan and price: Power Automate Premium $15/user/month annual; Process $150/bot/month; Copilot Studio prepaid credits (about $0.008/credit pay-as-you-go per secondary source; official price not shown).

DESIGN CONNECTOR · AUTOMATION

Canva AI connector (in Claude and ChatGPT)

Lets Claude or ChatGPT open your Canva account to create, fill and resize designs from a chat, for example ten story sizes from one post.

WHAT IT MEANS FOR YOU

Turns a written campaign into first-draft visuals in Canva, where designers polish them. The catch: brand-kit support inside the chat is unclear (sources disagree).

Try — for draft layouts and resizing of public campaign material | 15 min to start | Free connector

Amber Designs stay in Canva; what the AI sees follows your chat plan. Use a test folder first.

2	Unclear	Free
main chat apps supported (Claude, ChatGPT)	brand-kit use inside chat	connector itself

Try this before Friday

exercise · 15 min to start

> Connect Canva in the Claude or ChatGPT test account. Ask for a 3-slide carousel for a fictional 'autumn tableware week' using only public product photos, then open it in Canva and judge how

much fixing it needs.

Should we use it?

good for · not for · advice

GOOD FOR

- Resizing one post into story, reel cover and banner
- First drafts of event invitations from public text

NOT FOR

- Final brand-critical artwork without designer review

Better option? Canva's own built-in AI if you only want quick edits inside Canva.

Our advice: Use a test Canva folder first, and connect only a Canva Business/Teams account (where Canva says content never trains its AI).

Privacy and data details

plan · sources

The chat assistant reads and writes the designs you allow; designs stay in Canva under Canva's terms. What the AI sees falls under your chat plan's terms. In Claude the connector needs a paid plan; in ChatGPT it sits under Settings > Apps. Do not put unreleased collection photos or price lists into designs made through the connector until settings are checked.

Plan and price: Connector itself free; needs a paid Claude plan (or ChatGPT) plus your Canva plan.

SAFE AUTOMATION SETUP · AUTOMATION

Business API with zero data retention (for automations)

When AI is built into automations (feeds, reports, chatbots), the business API is not used for training, and the provider can agree to keep nothing at all. A gateway can also swap secrets for placeholders before they reach the AI.

WHAT IT MEANS FOR YOU

Matters once the team automates posting, reports or website chat: choose API terms before building. The catch: zero retention needs a sales agreement, and some top models require 30-day storage.

Worth a look later | 1 hour with IT when automation starts | Pay per use | ◆ Gateway tested by us

● Amber API data not trained on by default; kept 30 days unless zero retention is agreed.

30 days
default API deletion (Anthropic; OpenAI abuse logs 30 days)

Sales only
zero retention is agreed with the vendor

Not trained
API data by default at OpenAI and Anthropic

Try this before Friday

exercise · 1 hour with IT when automation starts

> No hands-on exercise. Write down the 3 automations the team wants most (e.g. weekly Instagram report, product description generator, website chat) and mark the data each would touch as green, amber or red.

Should we use it?

good for · not for · advice

GOOD FOR

- Automated reports, website chat, content pipelines
- Contracts with clear data terms

NOT FOR

- Individual staff chatting (use the business chat plans)

Our advice: Our library tested a gateway that swaps secrets for placeholders before they reach the AI (ThinkWatch Lite): it works, but only records by default. Plan the setup with IT.

Privacy and data details

plan · sources

OpenAI: API data not trained on by default; abuse-monitoring logs kept 30 days; zero retention for eligible endpoints via sales. Anthropic: API inputs and outputs deleted within 30 days unless agreed otherwise; zero retention for qualifying features; some 'Covered Models' need 30-day retention (since June 2026 the top models must keep traffic 30 days even for business customers, per Reuters via resultsense). No customer personal data in automations without a legal check.

Plan and price: Pay per use. Zero data retention available on request for eligible endpoints and features (OpenAI: contact sales; Anthropic: by agreement).

Library id: `09b7d9e6fc` — Gateway tested by us

H) MODELS & CHAT · 6 TOOLS

AI models and chat interfaces

Start with Copilot Chat (already paid for, same contract as Outlook, no training). Then buy ONE writing plan, Claude Team or ChatGPT Business (about $20–25 per user per month), after the team's own Azerbaijani test. Business plans do not train on company data; personal accounts can, so personal accounts are banned for work. Local models keep secret text on the laptop but are clearly weaker. Nobody has published Azerbaijani quality scores for the big models.

COMPARISON · PLANS, PRICES, TRAINING, LANGUAGES

AI models and chat interfaces side by side

MODEL / INTERFACE	PLAN	PRICE PER USER / MONTH	TRAINS ON DATA?	AZ / RU QUALITY NOTES
Microsoft Copilot Chat	Included with Microsoft 365 (work login)	$0 extra	● No	Azerbaijani caption quality unproven; test it.
Microsoft 365 Copilot Business add-on	Add-on, up to 300 users	$18 promo / $21 list / $25.20 monthly	● No	Same models as Copilot Chat; reads your mail and files.
ChatGPT Business	Team workspace, min. 2 users	$20 annual / $25 monthly	● No (off by default)	No published Azerbaijani data; test it.
Claude Team	2–150 seats	$20 annual / $25 monthly	● No by default	Correct Russian summary in our Sonnet 5.5 test; Azerbaijani untested.
Perplexity Enterprise Pro	Per seat	~$34–40 (secondary sources)	● No, by contract (secondary sources)	Not tested; research tool, not a writer.
Gemini on personal Gmail	Consumer / Google AI Pro	Free / ~$19.99	● Yes with Keep Activity on	Not tested by us.
ChatGPT / Claude personal (Free, Plus, Pro, Max)	Personal	Free–$20+	● Yes unless switched off / if allowed	Same models; not for company work.
DeepSeek (hosted app)	Free	Free	● Yes; data in China	Not tested; do not use for company data.
Local model (LM Studio /	On your own computer or	Free	● No (nothing leaves the machine)	Tiny model in our test: Azerbaijani 3

MODEL / INTERFACE	PLAN	PRICE PER USER / MONTH	TRAINS ON DATA?	AZ / RU QUALITY NOTES
Ollama, Gemma or Qwen)	server			of 5, Russian 7 of 9 right. Weaker than cloud.

No vendor publishes Azerbaijani quality scores. Run the 9-caption blind test in "Choosing the model per job" before buying a plan.

AI ASSISTANT YOU ALREADY OWN · MODELS & CHAT

Microsoft Copilot Chat (work account, green shield)

Microsoft's AI chat inside your existing Microsoft 365 work login. It drafts posts and texts in Azerbaijani, Russian and English, summarises documents you upload and creates images. The paid Business add-on also reads your mail, Teams and SharePoint.

WHAT IT MEANS FOR YOU

The safest place to start tomorrow, at no extra cost and with no new vendor: prompts fall under the Microsoft 365 contract you already have and are not used for training. The catch: Azerbaijani quality is unproven, images and brand control are basic.

Try now | 15 min to start | $0 extra

● Green — Same contract as your Outlook mail; not used for training. Only with the work account and green shield.

$0 extra	Not used	18 Aug 2026
with your current Microsoft 365 licence	for model training (work account)	date of Microsoft's data-protection page

+ Try this before Friday

exercise · 15 min to start

> Open m365.cloud.microsoft/chat (or Copilot in Edge or Teams) with your WORK account and check the green 'protected' shield shows. Ask for 3 Instagram captions for a made-up 'autumn table setting' post, each in AZ, RU and EN, plus one matching image. A native speaker scores the Azerbaijani out of 5. Then sign in with a personal Microsoft account and see that the shield is gone.

+ Should we use it?

good for · not for · advice

GOOD FOR

- First drafts of captions and product texts in 3 languages
- Summarising briefs and supplier PDFs you upload

NOT FOR

- Final luxury product visuals
- Customer personal data lists

- Staff who are most nervous about confidentiality

- Turning on the paid add-on before SharePoint permissions are cleaned up

Better option? Claude Team or ChatGPT Business for stronger long-form writing and connectors; Adobe Firefly or Canva Business for brand-grade images.

Our advice: Make this the default 'safe place' for everyone from day one. Ask IT to confirm Copilot Chat is on for your licences, that the shield shows for every user, to switch on audit and retention in Purview, and to add a DLP rule (card numbers plus keywords like 'dövriyyə', 'оборот', 'turnover'). The paid add-on can find every file a person has access to, so fix open SharePoint folders first.

+ Privacy and data details

plan · sources

Microsoft processes data as a processor under its Data Protection Addendum, the same terms as Exchange email and SharePoint. Prompts, answers and company files are NOT used to train models (Microsoft Learn, updated 18 Aug 2026). Chats are logged in your own Microsoft 365, kept under YOUR retention policy, and searchable in Purview/eDiscovery; uploaded files stored in your OneDrive. ISO/IEC 27018, GDPR support; the Customer Copyright Commitment covers output claims. Exceptions: web queries sent to Bing have user and tenant IDs removed but fall under Bing's terms and outside the EU Data Boundary; Anthropic models inside Copilot are also outside the EU Data Boundary. Data region follows your tenant (ask IT). A personal Microsoft account does NOT get this protection.

Plan and price: Copilot Chat: included with eligible Microsoft 365 business licences at no extra cost (agents billed by use). Copilot Business add-on: $18/user/month annual (promo 1 Jul–31 Dec 2026, first year; list $21), or $25.20 month-to-month, up to 300 users. Enterprise version about $30. Availability varies by market: check Azerbaijan with your Microsoft partner.

CHAT ASSISTANT, TEAM PLAN · MODELS & CHAT

ChatGPT Business (not Free or Plus)

OpenAI's team plan for ChatGPT: Projects, Custom GPTs, image generation and editing (GPT Image 2.5), apps such as Canva, and agent mode for multi-step tasks.

WHAT IT MEANS FOR YOU

The tool most staff already know, now with a company workspace. Strong for AZ/RU/EN captions, ad variants, visuals and quick ideas. The catch: no data residency on Business, logo or engraving accuracy is unproven, and OpenAI's own pages blocked our reader.

Try now | 20–30 min to start | $20–25/user/mo | ◆ GPT Image 2.5 tested by us 12 Oct 2026

● Green Business data not used for training by default. Personal Free/Plus train unless switched off.

Off by default	0 images	2
training on Business data	we could generate in our test (needs a paid account)	minimum users

+ Try this before Friday

exercise · 20–30 min to start

> Write a brief for a made-up 'New Year gift guide: 5 items' and ask for captions in AZ, RU and EN in a fixed tone. Then upload one public product photo from the website and ask for a festive background; zoom in on logos and hallmarks. Optionally build a Custom GPT 'Italdizain captions' from public website text and 5 public posts.

+ Should we use it?

good for · not for · advice

GOOD FOR

- Captions and product texts in AZ/RU/EN
- Ad copy variants for A/B tests
- Custom GPTs with a brand-voice guide; Canva app inside chat

NOT FOR

- Final packshots of engraved or logo-heavy items without human checking
- Personal Plus accounts for company work
- Anything needing an EU-only data guarantee

Better option? Claude Team for long-form RU/EN copy; Copilot to stay inside Microsoft.

Our advice: Choose ONE paid team plan (ChatGPT or Claude) after the Friday comparison; paying for both doubles the cost and splits the prompt library. A person checks every product detail in an AI image.

+ Privacy and data details

plan · sources

OpenAI says Business, Enterprise, Edu and API data is not used for training by default, including data in apps and agent mode (via search snippets and secondary sources; OpenAI's pages blocked our reader). Encryption AES-256 at rest, TLS 1.2+; DPA offered; SOC 2 Type 2 and ISO 27001/27017/27018/27701 listed on OpenAI's page. Data residency (EU and others) is offered to Enterprise, Edu and API, not Business by name. Retention details for Business not confirmed on an official page; a secondary source says deleted chats leave OpenAI's systems within 30 days. Free and Plus: training on unless switched off.

Plan and price: About $20/user/month billed annually or $25 monthly, minimum 2 users, after a 2 Apr 2026 price cut (secondary sources citing OpenAI). Premium seat $100/$125. Enterprise: contact sales.

CHAT ASSISTANT, TEAM PLAN · MODELS & CHAT

Claude Team (not Free, Pro or Max)

Anthropic's Claude for teams. It writes and edits long copy in brand voice, drafts briefs, and makes quick slide decks. Projects hold your brand guide; Skills store repeatable instructions; connectors link Microsoft 365, Canva and Meta Ads.

WHAT IT MEANS FOR YOU

A careful writer and editor: in our test it drafted a 6-slide deck in 85 seconds and left unknown numbers blank instead of inventing them. The catch: no image generation, no EU-only storage, and Azerbaijani is untested.

Try now | 15–30 min to start | $20–25/seat/mo | ◆ Tested by us 12 Oct 2026 (Claude Slides)

● Green No training on Team content by default. Personal plans train only if the user allows it.

85 s	0	2–150
to draft a 6-slide deck in our test	invented figures in our test	seats on Team

Try this before Friday

exercise · 15–30 min to start

> Use a Team seat, or a free account with 'Help improve Claude' switched OFF in Settings > Privacy, and made-up data only. Create a Project 'Italdizain voice' with the public About page and 5 public Instagram captions. Rewrite a made-up porcelain-set description in luxury tone in AZ, RU and EN, then ask for a 5-slide 'Q4 campaign idea' deck with placeholders for every number. Compare with ChatGPT and Copilot on the same texts.

Should we use it?

good for · not for · advice

GOOD FOR

- Long product stories, newsletters and website copy in RU/EN
- Rewriting supplier texts into brand voice
- Campaign briefs and first-draft decks

NOT FOR

- Generating images or video
- Customer data
- Teams needing EU-only storage

Better option? ChatGPT Business if the team prefers its image tools.

Our advice: Compare it head to head with ChatGPT on the same 3 texts and keep the one whose Azerbaijani native speakers rate higher. If chosen, buy Team (no personal accounts) and switch off 'Rate chats' in admin settings.

+ Privacy and data details

plan · sources

Under Anthropic's Commercial Terms (Team, Enterprise, API), chats are not used for training by default. Exception: chats sent as feedback (thumbs up/down) may be used; an admin can turn 'Rate chats' off. Deleted chats leave backend storage within 30 days; chats flagged for policy violations can be kept up to 2 years. Since June 2026 traffic on the top models must be kept 30 days even for business customers (Reuters via resultsense). Processing US/global; no EU-only option found. SOC 2 Type II, ISO 27001:2022 and ISO 42001. Consumer plans (Free, Pro, Max): since Aug 2025 users choose whether chats train models; if allowed, kept 5 years.

Plan and price: Team Standard $20/seat/month annual or $25 monthly; Premium $100/$125 (5x usage, adds Claude Code and Cowork). 2 to 150 seats. Enterprise $20/seat plus usage at API rates, adds custom retention, audit logs and SCIM (claude.com/pricing, 13 Oct 2026).

Library id: `9a30aef757` — Tested by us 12 Oct 2026 (Claude Slides)

MODEL CHOICE · MODELS & CHAT

Choosing the model per job (Claude, GPT, Gemini, open-weight)

A simple map of which AI model to use for which marketing job, and what each costs, so the team doesn't overpay or use the wrong model.

WHAT IT MEANS FOR YOU

Everyday copy: Claude Sonnet 5.5 or GPT-6.1 Sol. Hard strategy: Claude Fable 5.1 or GPT-6 Astra. Bulk tagging: Gemini 3.8 Flash. The catch: nobody has published Azerbaijani scores, so your own test decides.

Try now | 30 min | Included in chat plans

Amber The plan matters more than the model: business terms apply only inside business plans.

$0.43 vs $1.94
Sonnet 5.5 vs Opus 5.5 on our made-up report test, both all correct

82.6 vs 81.9
Fable 5.1 vs GPT-6 Astra on BenchLM (overlapping ranges)

Not found
published Azerbaijani scores for any big model

+ Try this before Friday

exercise · 30 min

> Take one public product (e.g. a vase from the website). Run the same caption prompt in Copilot, Claude and ChatGPT, in Azerbaijani, Russian and English. A native speaker scores the 9 outputs blind, 1–5.

+ Should we use it?

good for · not for · advice

GOOD FOR

- Picking a default model for captions and SEO texts
- Keeping costs down on bulk product descriptions

NOT FOR

- Choosing by leaderboard alone: your own AZ/RU test matters more

Better option? Ignore new model names week to week. Re-test once a quarter on the same 10 company prompts.

Our advice: Keep a simple scorecard in SharePoint. The Azerbaijani result decides which team plan to buy.

+ Privacy and data details

plan · sources

Inside Claude Team, ChatGPT Business or Copilot, business terms apply; through personal apps they do not. Open-weight models (Qwen3.8, DeepSeek V4.1-Flash with MIT weights) are safe only when run on your own machine or server; DeepSeek's hosted service stores data in China. Gemini 3.8 Flash through Google's paid API or Workspace is not trained on Workspace data (Google help page).

Plan and price: In chat plans: included. API per million tokens (input/output): Claude Sonnet 5.5 $2/$10, Opus 5.5 $4/$20, Fable 5.1 $10/$50; GPT-6.1 Sol $2/$10; GPT-6 Astra about $10/$50 (unverified tracker); Gemini 3.8 Flash $0.75/$3.75 (intro price, said to double 1 Jan 2027).

RESEARCH ASSISTANT · MODELS & CHAT

Perplexity Enterprise Pro

AI search that answers with linked sources. Good for competitor, trend and keyword research across the web.

WHAT IT MEANS FOR YOU

Fast market research for SEO and campaigns, with sources you can check. The catch: it adds little for writing, and the retention controls may need the pricier tier.

Try — for public web research (competitors, trends, SEO topics) | 15 min | ~$34–40/seat/mo

Amber — Enterprise: no training by contract (secondary sources). Personal Pro has no such guarantee.

$40	Unknown	Sources
Enterprise Pro per seat/month (secondary)	data residency	every answer links where it came from

Try this before Friday

exercise · 15 min

> Ask the free version: 'Top 10 questions people ask about buying Italian furniture in Baku, with sources'. Check whether 3 of the sources are real and current.

Should we use it?

good for · not for · advice

GOOD FOR

- 'What are luxury tableware brands posting in Baku and Dubai this month?'
- Finding SEO topics and questions people ask

NOT FOR

- Uploading internal reports

Better option? The research mode in Claude or ChatGPT, if you already pay for one of them.

Our advice: Use it only for public research. Buy seats only if research is a weekly job for someone.

Privacy and data details

plan · sources

Secondary sources (July 2026) say Enterprise Pro guarantees by contract that your data is not used for training, including by the model makers Perplexity uses. Configurable retention and audit logs may need Enterprise Max or 50+ seats (sources disagree). Data location unknown. The official pricing page we read showed only personal plans.

Plan and price: Enterprise Pro about $40/seat/month or $34 annually; Enterprise Max about $325/month (secondary sources; official enterprise page not readable). Personal Pro $17/mo annual.

Website: perplexity.ai/enterprise/pricing

LOCAL AI ENGINE · MODELS & CHAT

Ollama + open models (Gemma 4, Qwen) on a server

A free program that runs open AI models on a PC or a company server, so other tools and automations can use AI without sending data outside.

WHAT IT MEANS FOR YOU

Lets future automations, such as tagging customer comments or sorting 1C exports, run privately. The catch: our tests show small local models get Azerbaijani wrong too often for customer-facing text.

Worth a look later | 30 min (technical person) | Free locally | ◆ Checked by us (file not run)

● Green Local models: data stays on your machine. Avoid Ollama Cloud for RED data.

3 of 5	16 of 20	6.7 GB
Azerbaijani mails sorted right by a tiny local model (our test)	overall, about 3 s per mail on 2 CPUs	Gemma 4 12B file (checked, not run)

Try this before Friday

exercise · 30 min (technical person)

> Only for someone technical: install Ollama, run a Gemma 4 model, and ask it to sort 10 made-up customer comments (AZ, RU, EN) into 'delivery, price, quality, praise'. Count how many it gets right in each language.

Should we use it?

good for · not for · advice

GOOD FOR

- Private automations on a company server
- Classifying or tagging internal data
- A fallback when cloud AI is not allowed

NOT FOR

- Non-technical users (LM Studio is easier)
- Top-quality Azerbaijani copy

Better option? LM Studio for one person on a laptop.

Our advice: Keep this for the automation phase, not Friday.

Privacy and data details

plan · sources

Ollama's privacy policy (March 2026) says it does not access prompts or answers when models run locally; it may collect version and request-count metadata. Its cloud models process prompts on its servers without training on them. Open models (Gemma 4 tagged Apache 2.0) run fully offline.

Plan and price: Free for local use. Ollama Cloud (paid) sends prompts to Ollama's servers.

Website: ollama.com

I) OUR LIBRARY · 8 TOOLS

From our own library

Items from Huseyn's AI Instruments library (2,194 cards, about 600 with test results) that fit the marketing team and did not already appear above. Most are free add-ons that run on the team's own Mac. Tests used made-up data. Library items elsewhere on this page carry a 'library' chip too. Every item that came from the library is listed in the app's Briefs page as 'marketing-friday-2026-10'.

EVERYDAY AI MODEL · OUR LIBRARY

Claude Sonnet 5.5

Anthropic's everyday Claude model (the engine behind the chat), built for routine work such as summaries, drafts and reports.

WHAT IT MEANS FOR YOU

In our test it answered every checkable question as well as the pricier Opus, for about a quarter of the cost, and wrote a correct Russian summary. The catch: slow on big jobs (about 3 minutes).

Try now | 0 min to switch | In Claude plans; API $2/$10 per M tokens

◆ Tested by us (made-up board report)

● Green Not trained on via Team/Enterprise/API; personal plans only if 'Help improve Claude' is on.

$0.43 vs $1.94	5 of 5	3 min
cost of the same job on Sonnet versus Opus	checked answers right, same as Opus	to read a 30 KB report and sales table

+ Try this before Friday

exercise · 0 min to switch

> Give Claude an invented boutique sales table and a short brief. Ask for a 3-sentence Russian summary and a week of English captions, then check every figure by hand.

+ Should we use it?

good for · not for · advice

GOOD FOR

- Daily drafting, summaries and Russian-language text
- Cross-checking a report against raw data

NOT FOR

- Instant answers on big jobs
- Adding up hundreds of rows without a spreadsheet check

Better option? Opus 5.5 only for long or hard jobs; on routine work it showed no gain.

Our advice: Make it the default model for routine marketing work, on a company account. Azerbaijani was not tested, so a person still checks Azerbaijani copy.

+ Privacy and data details

plan · sources

Text goes to Anthropic. On Claude Team, Enterprise or the API it is not used for training by default (30-day standard retention; zero retention available on API). On personal Free, Pro or Max accounts it is used only if 'Help improve Claude' is on (page updated 16 Mar 2026), and then kept up to 5 years.

Plan and price: API $2 input / $10 output per million tokens; included in Claude subscriptions within plan limits.

PRODUCT PHOTO CHECKER · OUR LIBRARY

Photoroom Fidelity Layer (the 'check against the original' rule)

A Photoroom service that compares an AI-made product picture with the real product, finds the differences and repairs them. Access is still limited.

WHAT IT MEANS FOR YOU

The key lesson for luxury goods: even the best AI image tools keep a product fully intact only about 3 times in 10. You cannot buy it today, so the team copies the check by hand.

Worth a look later | Not available yet | Not stated | ◆ In our library (vendor figures, not tested by us)

● Amber — Cloud service; training, retention and residency unknown. No unreleased products.

29%	38.2%	850
products kept fully intact by the best ordinary AI tool	with the checking layer: still not fully automatic	products in Photoroom's own test (vendor figures)

+ Try this before Friday

exercise · Not available yet

> Pick 5 public product photos with a logo or engraving. Restyle each in any image AI (Copilot, ChatGPT or Gemini), then count how many come back fully intact: logo, hallmark, stones and dial. Bring the score.

+ Should we use it?

good for · not for · advice

GOOD FOR

- Understanding the real risk of AI photos of jewellery and watches
- Designing the check step before any AI brand image goes out

NOT FOR

- Anyone wanting a tool today
- Large catalogues

Better option? Any image AI plus a human side-by-side check, available now.

Our advice: Take the lesson, not the product: no AI product image of a watch or jewel is published without a side-by-side check with the original.

+ Privacy and data details

plan · sources

A cloud service: product photos would go to Photoroom. Training on inputs, retention, data residency and plan are all unknown from Photoroom's blog post.

Plan and price: Unknown; limited access, price not stated in the post.

Library id: `5dc4be1fe2` — In our library (vendor figures, not tested by us)

Sources

- photoroom.com/blog/introducing-photoroom-fidelity-layer-for-image-e...
- Library 5dc4be1fe2

Website: photoroom.com/blog/introducing-photoroom-fidelity-layer-for-image-editing

INSTAGRAM WRITING HELPER · OUR LIBRARY

Instagram Agent Skill

Thirteen free Claude add-ons that draft Reels scripts, captions, carousels and a posting plan, and check captions before posting by stripping 'AI-sounding' phrases. Nothing posts by itself.

WHAT IT MEANS FOR YOU

Faster caption clean-up and a repeatable pre-post checklist for boutique accounts. The catch: its scores only understand English, so Russian or Azerbaijani posts get wrong scores.

Try — for cleaning up English captions | 15–20 min | Free | ◆ Tested by us 12 Oct 2026

● Green Scripts run locally with no network; drafting goes through your Claude account.

24 → 68	11	43 vs 62
'sounds human' score of our English test caption	stock phrases fixed automatically, under 1 second	same opening line scored in Russian vs English

+ Try this before Friday

exercise · 15–20 min

> Write a deliberately robotic English caption for an invented porcelain set. Run the caption cleaner and checker, compare before and after, then compare with the team's own edit.

+ Should we use it?

good for · not for · advice

GOOD FOR

- Cleaning a draft caption before a boutique posts it
- Checking hashtag count, length and the visible first line

NOT FOR

- Judging Russian or Azerbaijani posts
- Choosing the best hook

Better option? A plain Claude chat with a one-page brand brief gives most of the drafting value; the add-on adds the checks.

Our advice: Use the cleaner and checker; a person still edits and posts. Our test found a stray '!' left behind, and the scorer ranked 'Stop scrolling...' first while warning against it.

+ Privacy and data details

plan · sources

The add-on is text files and small scripts on your Mac, tested in a sealed box with no network. It has no Instagram login and needs no key. Drafting runs through Claude, so text goes to Anthropic under your plan's rules. Do not paste client names, DMs or sales figures.

Plan and price: Free (MIT); needs Claude (Claude Code) or Python.

Library id: `32dc4dc0b4` — Tested by us 12 Oct 2026

Sources

- github.com/Jakeschincariol/instagram-agent-skill
- Library tests 32dc4dc0b4 and 85ea490d28

Website: github.com/Jakeschincariol/instagram-agent-skill

BRAND RULES FILE · OUR LIBRARY

DESIGN.md brand rules file

One file that holds the brand colours, fonts and spacing, with the reasons, so any AI building a page or banner follows the same look. A checker tests readability.

WHAT IT MEANS FOR YOU

Stops AI-made banners and landing pages drifting off-brand: in our test, brand colour use went from 0 of 9 without the file to 9 of 9 with it. The catch: it guides the AI; nothing enforces it.

Try — for keeping AI-made web pages and banners on-brand | 15 min | Free | ◆ Tested by us

● Green Runs locally; brand colours and fonts are not sensitive.

9 of 9	3 of 3	9 s
brand colours used with the file, versus 0 without	planted mistakes the checker found	per check, nothing to install

+ Try this before Friday

exercise · 15 min

> Write a DESIGN.md with the Italdizain colours and fonts taken from the public site. Run the lint

check, then ask Claude for one landing-page mock-up with and without the file, and compare.

Should we use it?

good for · not for · advice

GOOD FOR

- One shared brand file per Italdizain brand or boutique line
- Checking a palette is readable before building on it

NOT FOR

- Guaranteeing the finished page follows the rules
- Anything needing a stable format: the spec is still changing

Our advice: Adopt it as the single source of brand colours for any AI-made page. Expect less drift, not better taste.

Privacy and data details

plan · sources

The file and checker run locally (npx). Pages made with it go through whatever AI you use, so the usual plan rules apply.

Plan and price: Free (Apache-2.0).

Library id: `c4e8b8bfe1` — Tested by us

Sources

- github.com/google-labs-code/design.md
- Library test c4e8b8bfe1

Website: github.com/google-labs-code/design.md

AI-SEARCH WEBSITE CHECKER · OUR LIBRARY

geo-seo-claude (AI-search website checker)

Claude add-ons that check whether ChatGPT, Claude and other AI assistants can read and quote a website, plus classic SEO checks.

WHAT IT MEANS FOR YOU

Shows whether italdizain.az is accidentally hidden from AI search, which shoppers increasingly use. The catch: its 0 to 100 score is written by the AI, not measured, and its scripts have bugs.

Try — for a checklist of AI-search fixes, ignoring its score | 20 min to set up | Free | ◆ Tested by us

● Green Reads public pages only; no internal data needed.

14 of 14	2 bugs	13 s
AI crawlers classified correctly		to install its packages

found in its scripts (dropped links, invented email)

Try this before Friday

exercise · 20 min to set up

> Run the quick check on the public italdizain.az home page. List what it says about robots.txt, AI crawlers and script-only pages; ignore the score.

Should we use it?

good for · not for · advice

GOOD FOR

- Checking whether the site blocks AI crawlers by accident
- A first list of AI-search fixes for the web team

NOT FOR

- Trusting the score as a measurement
- Publishing its generated files unchecked

Better option? Google Search Console plus Lighthouse, for real data from your own traffic.

Our advice: Read the findings, not the score, and check any file it writes: in our test its llms.txt generator invented a contact email. Google says no llms.txt is needed for its AI answers anyway.

Privacy and data details

plan · sources

Scripts run locally in their own Python environment and read public pages. The report is written by Claude, so the usual plan rules apply.

Plan and price: Free (MIT); needs Claude Code.

Library id: `9a4871b7dd` — Tested by us

Sources

- github.com/zubair-trabzada/geo-seo-claude
- developers.google.com/search/docs/appearance/ai-features
- Library test 9a4871b7dd

Website: github.com/zubair-trabzada/geo-seo-claude

SOCIAL MEDIA ANALYST ADD-ON · OUR LIBRARY

Social Media Research Skills

Thirteen ready-made research recipes that make Claude study public Instagram, TikTok and YouTube data and return a competitor, trend or influencer brief.

WHAT IT MEANS FOR YOU

A quick read on how rival luxury, watch and tableware brands post. The catch: every recipe needs a paid ScrapeCreators data key, price not stated.

Try — for one-off competitor research | 5 min to add; needs a paid data key | Free + data credits

◆ Tested by us (stopped: needs paid key)

● Amber Public data only, but queries go to ScrapeCreators (terms unknown).

13	1 credit	26 credits
research recipes in the set	cost of a normal request	cost of audience data

+ Try this before Friday

exercise · 5 min to add; needs a paid data key

> Without a key: read the competitor recipe and list which three competitor accounts you would run it on. With a key: run one small report on a single public brand and note the credits used.

+ Should we use it?

good for · not for · advice

GOOD FOR

- A one-off look at a competitor's social strategy
- An influencer shortlist

NOT FOR

- Ongoing monitoring
- Anyone unwilling to pay an outside data service

Our advice: We could not produce a report without the key. Find the price first; only two people maintain it.

+ Privacy and data details

plan · sources

Uses public social data only. Your queries (competitor and brand names) go to ScrapeCreators (terms, retention and training unknown) and the analysis goes through Claude. Do not add your own sales figures to the brief.

Plan and price: Skills free (MIT); ScrapeCreators credits, price not stated (1 credit per normal request, 26 for audience data).

Library id: `50a0635155` — Tested by us (stopped: needs paid key)

Sources

- github.com/ScrapeCreators/social-media-research-skills
- Library test 50a0635155

Website: github.com/ScrapeCreators/social-media-research-skills

PDF LEAK CHECKER · OUR LIBRARY

x-ray (PDF redaction checker)

A small free program that checks whether black boxes in a PDF really hide the text, or whether it can still be copied out underneath.

WHAT IT MEANS FOR YOU

Before a blacked-out report, price list or brief goes to an agency or AI tool, it shows in seconds whether turnover or client details still leak. The catch: it only warns and cannot fix.

Try now | 5 min | Free | ◆ Tested by us

● Green Runs entirely on your computer; nothing is sent anywhere.

2 of 2	0	2–3 s
hidden values found under fake black boxes	false alarms on properly redacted and untouched files	to check one page

+ Try this before Friday

exercise · 5 min

> Make a one-page PDF with an invented turnover figure and draw a black box over it in a normal editor. Run x-ray: it should flag it. Then redact properly and run again.

+ Should we use it?

good for · not for · advice

GOOD FOR

- A last check on any hand-censored PDF leaving the company
- Checking a folder of outgoing PDFs at once

NOT FOR

- Repairing the file
- Scanned, picture-only PDFs

Our advice: Use it as a second line after proper redaction. An empty result can also mean a box type it does not understand, so do a copy-paste test on anything very sensitive.

+ Privacy and data details

plan · sources

Runs entirely on your own computer, with nothing sent anywhere and no training or retention by anyone.

Plan and price: Free (BSD-2-Clause).

Library id: `7d8d635b18` — Tested by us

Sources

- github.com/freelawproject/x-ray

- Library test 7d8d635b18

Website: github.com/freelawproject/x-ray

MAC SCREENSHOT TOOL · OUR LIBRARY

macshot (screenshot blurring)

A free Mac screenshot and recording app with drawing tools, text capture from images, and automatic blurring of personal data.

WHAT IT MEANS FOR YOU

Blur client names, phones and sales numbers in a dashboard or CRM screenshot before sending it to an agency or pasting it into an AI. The catch: Russian and Azerbaijani text reading is untested.

Try now | 5 min | Free | ◆ In our library (not hands-on tested)

● Green Runs locally; keep its cloud upload options switched off.

5 min	Free	25
to install on a Mac	no subscription	people have contributed

+ Try this before Friday

exercise · 5 min

> Install it with 'brew install --cask macshot', screenshot an invented client table, and use the Censor tool. Then test text capture on one Russian and one Azerbaijani sample.

+ Should we use it?

good for · not for · advice

GOOD FOR

- Blurring names and numbers in screenshots before sharing
- Copying text out of screen captures

NOT FOR

- Windows PCs

Better option? CleanShot X or Shottr are alternatives.

Our advice: Install it, but leave the cloud upload options off. Not hands-on tested by us.

+ Privacy and data details

plan · sources

Runs locally on the Mac. Keep its upload options (Google Drive, S3 and similar) switched off and nothing leaves the computer.

Plan and price: Free (GPL-3.0).

Library id: `bc08577031` — In our library (not hands-on tested)

Sources

- github.com/sw33tLie/macshot
- Library bc08577031

Website: github.com/sw33tLie/macshot

J) BEFORE FRIDAY

Your checklist by role

Pick your role, try 3–5 of these (made-up or public data only), tick them off, and write short answers to the questions. Ticks are saved in this browser only.

SMM (Instagram, Facebook, TikTok)

- [ ] Microsoft Copilot Chat (work account, green shield)
- [ ] Canva Business (Magic Studio)
- [ ] Metricool
- [ ] Meta Business Agent (WhatsApp Business, Instagram, Messenger)
- [ ] Instagram Agent Skill

ANSWER ON FRIDAY

- Which of my weekly tasks did AI do at least as well, and how many minutes did it save?
- How good was the Azerbaijani (score 1–5) and the Russian?
- Would I trust an AI reply in client DMs, and for which questions?
- Which of my current apps (CapCut, personal ChatGPT) should I stop using for brand work?

Website and SEO

- [ ] Google Search Console AI setup + GA4 Analytics Advisor
- [ ] Bing Webmaster Tools – AI Performance report
- [ ] Otterly.AI
- [ ] Screaming Frog SEO Spider with AI prompts
- [ ] Product descriptions at scale, with a claims check

ANSWER ON FRIDAY

- What does AI currently say about Italdizain when asked 'where to buy X in Baku'?
- Which 5 fixes (sitemap, H1, language tags, alt text) should the contractor do first?
- Can AI draft our product texts in three languages to a quality we would publish after one edit?
- Semrush or Ahrefs: which one, or neither yet?

Advertising

- [ ] Meta Advantage+ creative and Ads Creative Studio
- [ ] Meta AI business assistant (in Ads Manager)
- [ ] Google Ads AI: AI Max, Performance Max assets, Asset Studio and Ask Advisor
- [ ] Meta Ads AI Connectors (official link from Claude or ChatGPT to Meta ads)
- [ ] Pencil (AI ad generator by Brandtech)

ANSWER ON FRIDAY

Content and design

- [ ] Adobe Firefly (with Express, Photoshop and Firefly Boards)
- [ ] Canva Business (Magic Studio)
- [ ] Photoroom
- [ ] ChatGPT Business (not Free or Plus)
- [ ] Photoroom Fidelity Layer (the 'check against the original' rule)
- [ ] CapCut

- Which Advantage+ switches changed our products or logos, and which are safe to leave on?
- Was the assistant's advice right when checked against the numbers?
- Do we want a read-only AI weekly report, and who owns it?
- Which ad data must never leave Meta or Google (revenue, customer lists)?

ANSWER ON FRIDAY

- How many AI product images came back fully intact (logo, engraving, colour)?
- Firefly, Canva or both: which fits our brand work?
- Where should the 'compare with the original' check sit in our process?
- Which CapCut projects should move to Adobe Express or Canva?

Team lead

- [ ] Green / amber / red paste rules + one-page AI policy
- [ ] Free and personal AI apps, and hosted DeepSeek (what to avoid)
- [ ] Azerbaijan Law on Personal Data + GDPR basics
- [ ] Choosing the model per job (Claude, GPT, Gemini, open-weight)
- [ ] Microsoft Purview DLP for Edge and Copilot

ANSWER ON FRIDAY

- Where did the team disagree when sorting data into green, amber and red?
- Which AI apps and accounts are people already using?
- Claude Team or ChatGPT Business: which one, for how many seats?
- What do we ask IT (Copilot on, Purview, Intune) and a lawyer (consent, localisation)?
- Who owns the brand-voice assistant and the paste rules?

K) FOR THE MEETING

Questions for Friday

1. Which 3 tasks do we hand to AI first, and who owns each one?
2. Do we adopt the green/amber/red paste rules as written, and who checks a sample of chats each month?
3. Copilot Chat for everyone from Monday: is it switched on for all our licences, and does everyone see the green shield?
4. Which ONE writing plan do we buy (Claude Team or ChatGPT Business), for how many seats, based on our Azerbaijani scores?
5. Canva Business, Adobe Firefly, or both for design and product images?

6. Do we ban personal and free AI accounts (and CapCut, Midjourney, Kling) for brand and company work?
7. What is our rule for AI product images: who compares each one with the real item before it is published?
8. Do we connect AI to Meta and Google ads read-only, and who is the one named person?
9. Do we test Meta's Business Agent on a spare WhatsApp number, or keep client chats human-only for now?
10. What do we ask IT (Purview, Intune) and a Baku lawyer (customer consent, data localisation) before going further?

What could not be verified

- OpenAI's own pricing and privacy pages blocked automated reading: ChatGPT Business price, retention and residency come from search snippets and secondary sources.
- Canva's and Midjourney's pages blocked reading: Canva Business price (~$25) and Midjourney terms come from search snippets or third-party guides.
- Azerbaijani quality was not verified for any tool or model; no vendor publishes it.
- Meta has not published whether uploaded ad creative, Business Agent chats or connector data train its AI, or how long connector data is kept.
- TikTok Symphony's advertiser terms on training, and its price, were not confirmed on a TikTok page.
- Microsoft Copilot Business availability and price for Azerbaijan; Purview coverage on Business Premium.
- Azerbaijan data-localisation claim (one law firm only) and whether customer consent covers foreign AI processing: needs a Baku lawyer.
- Gemini Enterprise prices (official page returned 404); Perplexity Enterprise terms (official page not readable).
- Adobe IP indemnity scope for partner models comes from a community expert, not Adobe.
- Several library items were read but not hands-on tested: Firefly Boards technique, Photoroom cards, n8n-MCP, macshot, rizzo-pii, Google Ads Asset Studio (needs a live account).

Left out to keep the list short

- **Higgsfield** — Trains on content unless Enterprise; video not yet a confirmed priority.
- **Agorapulse** — Does not publish its AI provider or training position; Sprout and Metricool cover the need.
- **Hootsuite** — Merged into the Sprout Social card as the close rival.
- **AdCreative.ai** — No security page or privacy policy found on its homepage; mentioned under Pencil.
- **Birch (formerly Revealbot)** — Meta's free automated rules cover most needs; no certificates named.
- **Madgicx** — Privacy policy from Jan 2023, hidden prices; mentioned under Ryze.
- **Smartly** — Enterprise budgets (~€5K/mo); its security page is cited as a yardstick under Brandwatch.
- **Surfer** — Azerbaijani support and training position unknown.
- **Profound** — Enterprise price (est. $2,000–5,000/mo); mentioned under Otterly.
- **Limina PrivateGPT** — No public price; Azerbaijani unconfirmed; paste rules plus Purview come first.
- **Synthesia, HeyGen** — Avatar video judged a doubtful fit for a luxury brand.
- **Pebblely** — Training answer hidden on its page; not ranked.
- **Mistral Le Chat Team** — $24.99/user; training row unlabelled on its page.
- **Library runners-up** — RampStack seo-onpage (7414b3aa5b), No AI Slop (63a2e52acc), marketingskills (e9cf7f6954), HY-MT1.5 (eb80bd694c), OpenEdit (9e991fe621), BrightBean Studio (f2bf0fc315), Open WebUI (b3fa190c2e), Archestra (05a580b436), Tulip (c77953d765), DeskcommCRM (de6816a5ac, unofficial WhatsApp bridge: ban risk).

Prepared 2026-10-13 by Claude on MacBook Air, for Huseyn Zeynalli. Facts come from vendor pages read on 13 Oct 2026 unless marked as third-party, snippet or library. The moving header is a shader gradient in Design Voice colours; it pauses off-screen and stays still if you turn off motion.
